9. REVISION HISTORY 307

1. Introduction

MF Fire Inc, retained *OMNI* to perform U.S. Environmental Protection Agency (EPA) certification testing on the Nova C wood stove. The Nova C is a free-standing, single burn-rate catalytic room heater designed for residential use. Testing was performed by OMNI-Test Laboratories at OMNI's facility in Portland, Oregon. The altitude of the laboratory is thirty feet above sea level. The unit was received in good condition and logged in on 06/19/2023, then assigned and labeled with *OMNI* ID #2468. *OMNI* representative Riley Tiegs conducted the certification testing and completed all testing by 08/15/2023. This report is organized in accordance with the EPA-recommended outline and is summarized in the Table of Contents immediately preceding this section. The results in this report are limited to the item submitted.

The testing methodology used is composed of two distinct aspects:

- **Particulate Matter Emissions:**

The Nova C wood stove was tested in accordance with the U.S. EPA 40 CFR Part 60, Subpart AAA – Standards of Performance for New Residential Wood Heaters using ASTM E2515, ASTM E2780 and EPA Method 28R. Particulate emissions were measured using sampling trains consisting of two Glass Fiber 47mm filters (front and back).

- **Stack Loss Efficiency:**

CSA B415.1:22 "Performance testing of solid-biofuel-burning heating appliance". This document prescribes the processes and methods in securing data that may be computed to arrive at an efficiency based on flue-gas losses. It is also used to calculate the emissions of carbon monoxide. Results obtained for this report were calculated using version 2.4 of the spreadsheet provided by CSA for use in conjunction with the current edition of the CSA B415.1 standard. Example calculations for CSA B415.1:22 are not provided in this report since the approved software is controlled by password protection.

Executive Summary

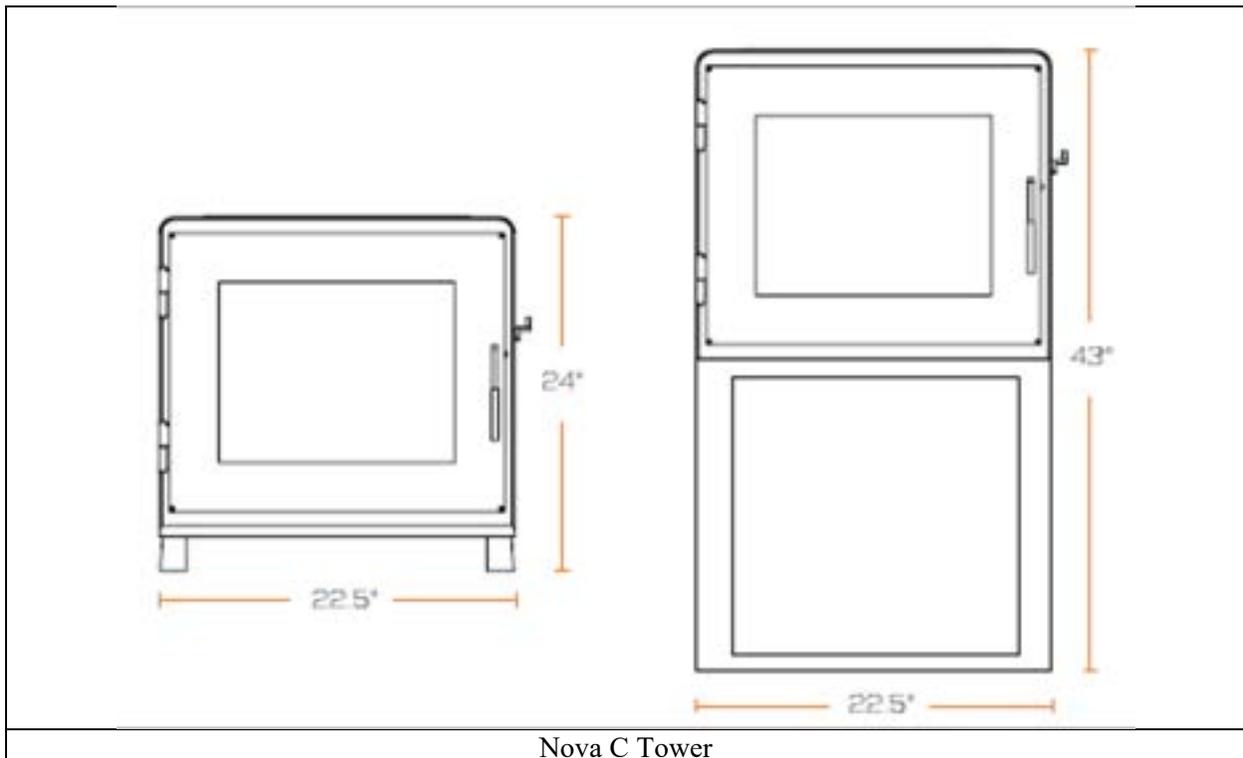

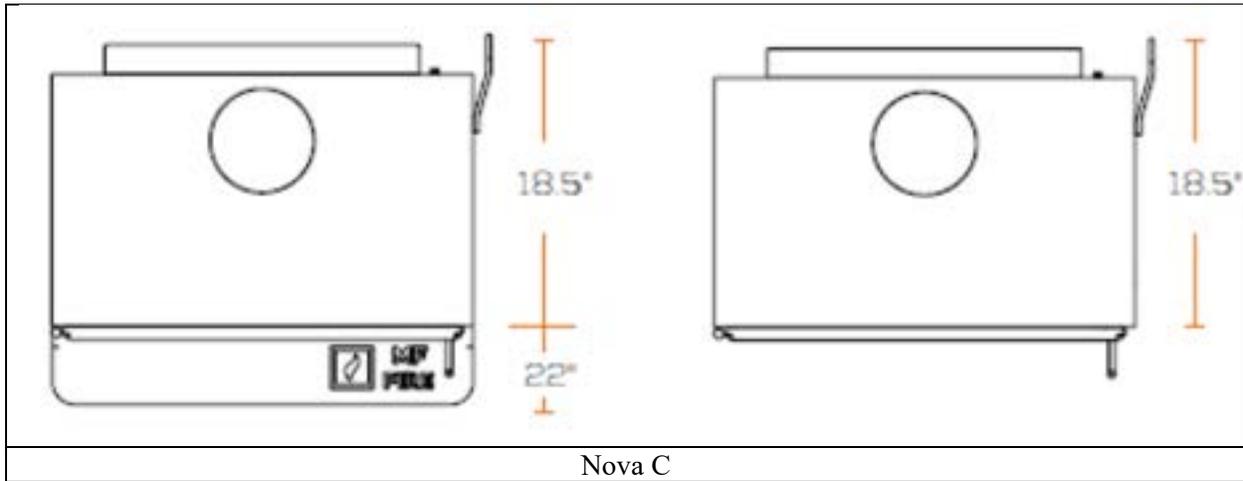

The MF Fire model Nova C is a single burn-rate appliance with fixed, non-adjustable air inlets. This testing regiment requires two valid test runs with burn-rates within 10% of their average values. Testing of the MF Fire model Nova C consisted of six test runs (Run 1 – Run 6) with two runs (Run 2 and Run 6) being used for the single burn-rate average emissions. Run 1 was an invalid test run due to the train precision being out of allowances provided by the standard. Run 3 was an invalid test run due to excessive filter temperatures. Run 4 was an invalid test run due to post-test leak check failure of the pitot tube and associated plumbing. Run 5 was an invalid test run due to proportionality issues between trains A and B.

The average emissions of the two valid tests (Run 2 and Run 6) included in the results indicate a particulate emission rate of 1.91 grams per hour. The burn-rates of runs 2 and 6 differed by 3.3 percent of their average.

The proportionality results for the two test runs used were acceptable. Quality check results for both runs are presented in Section 3 of this report. No sampling anomalies occurred, runs 2 and 6 were determined to be valid and appropriate.

Appliance Description

The Nova C stove is a free-standing single-burn rate wood burning stove that uses natural draft for airflow and a catalyst for emission reduction. Primary air is vented from the back of the stove through two 1.65 x 0.98 in. rectangular openings. Primary air is then transferred through a U-shape square tube where it is heated and then forced downward into the firebox by the door. Secondary air is drawn from the back of the stove through a 5.44 in x 0.50 in. rectangular opening where it enters the interior of the baffle and emerges into the firebox through a matrix of holes on the bottom side of the baffle. The appliance is offered with a leg version (Nova C) and a pedestal version (Nova C Tower). Both models are identical, only the supporting structure (legs or pedestal) are different.

General Information

Type: Wood-Fired Room Heater (Freestanding, Catalytic), Single Burn-Rate

Materials of Construction: The unit is constructed primarily of mild steel. The firebox is lined with firebrick over insulation board. The feed door has a 14.25 inches x 12.75 inches glass panel and 1" fiberglass rope gasket.

Air Introduction System: The Nova C stove is a free-standing single-burn rate wood burning stove that uses natural draft for airflow and a catalyst for emission reduction. Primary air is vented from the back of the stove through two 2.375 in. x 0.50 in. rectangular openings. Primary air is then transferred through a U-shape square tube where it is heated and then forced downward into the firebox by the door. Secondary air is drawn from the back of the stove through a 5-7/8 in. x 0.50 in. rectangular opening where it enters the interior of the baffle and emerges into the firebox through a matrix of holes on the bottom side of the baffle.

Combustion Control Mechanisms: None - single burn rate appliance with no controls

Combustor: MF Fire, Inc SKU N11, 2.5" x 13"x 2"

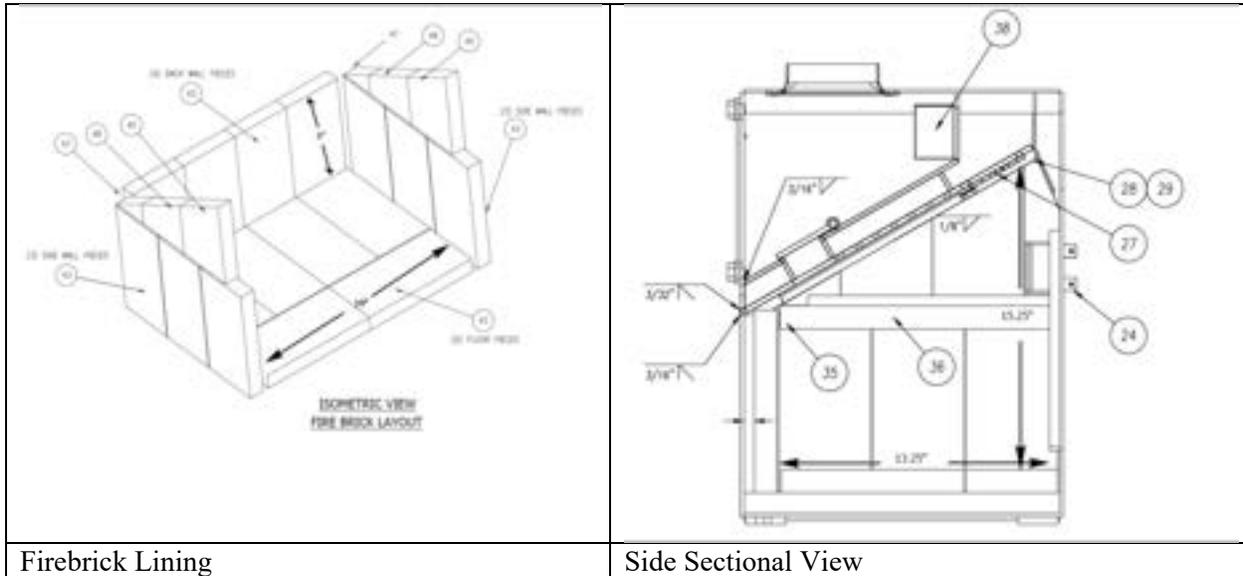

Internal Baffles: Air travels through a catalytic combustor located above the firebox. The baffle also has a bypass opening where exhaust travels when the bypass is open.

Flue Outlet: The 6" diameter flue outlet is located at the rear of the top of the appliance.

Other Features: None

Firebox Volume and Calculations

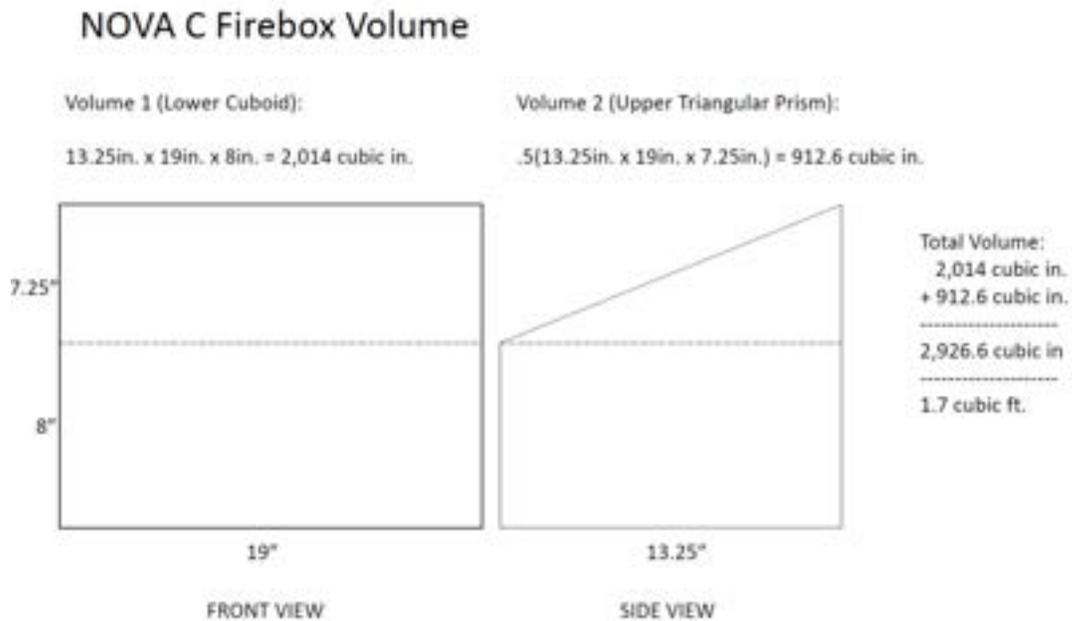

The firebox is constructed of mild steel and lined with firebricks. A steel frame with ceramic glass fuel loading door with an opening measuring 15.28" W x 12.76" H dominates the front side of the appliance.

The extents of the regions that define the total volume within the firebox are identified as being usable.

Total firebox volume = 1.7 ft³

Usable Firebox Volume = Total Firebox Volume – 0 = 1.7 ft³

2. Testing Preparation and Facility

Conditioning

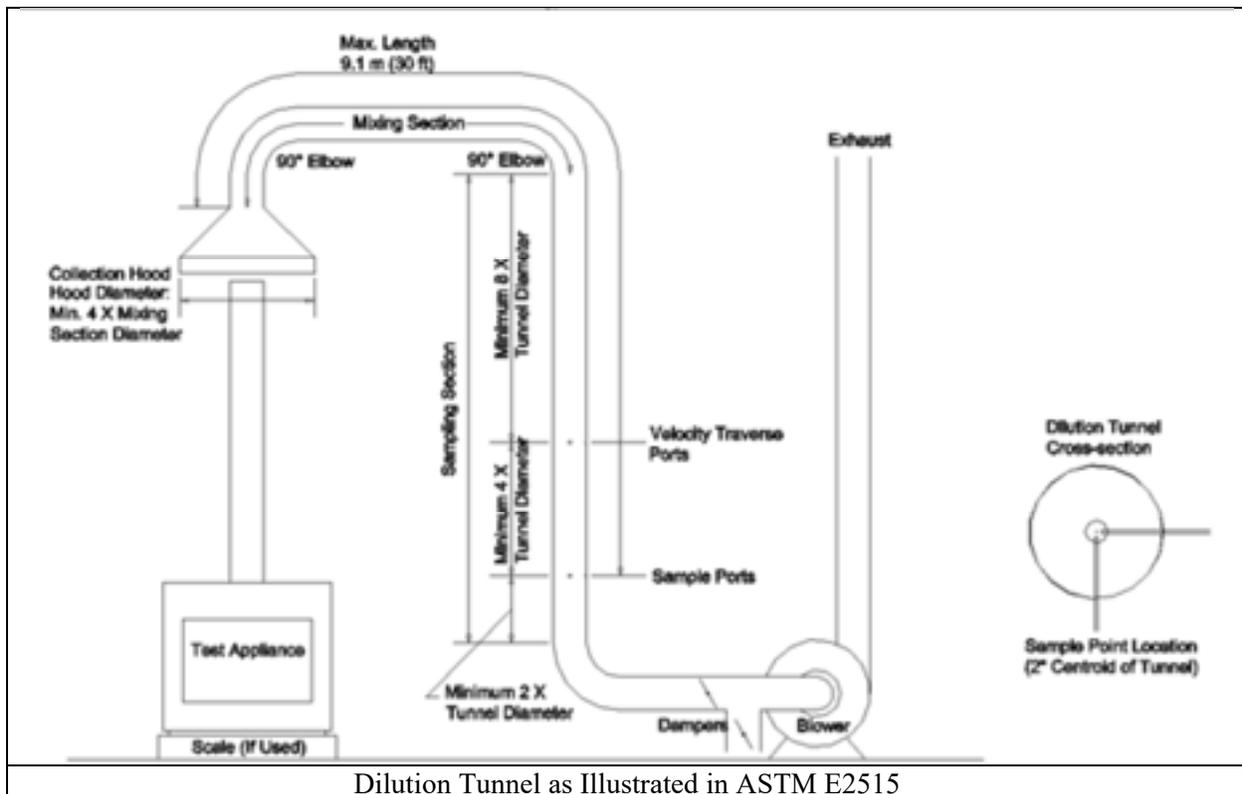

The required minimum 50 hours of conditioning was conducted by the manufacturer in advance of shipment of the appliance to OMNI. See Section 4 of this report for the conditioning data.

Appliance Installation

In preparation for testing, the appliance was placed on a 1000 lb. capacity scale and fitted with a section of single wall connector pipe to a height approximately eight feet from the top surface of the scale and extended further upward to a height of approximately 15 feet with UL 103 solid-pack chimney. Both the chimney connector and chimney were a nominal six inch inside diameter. The base portion of the solid pack chimney was fitted with a 3/8-inch diameter hole for ready access of a flue gas probe and with a 3/16" diameter hole for ready access of a flue temperature probe. A 3/8" diameter hole was also procured at the base of the chimney connector within 1 foot of the appliance for the purpose of serving a draft probe. All joining sections of pipe and flue attachment were sealed with furnace cement. The appliance was then fitted with thermocouples for surface temperature measurement.

Dilution Tunnel

OMNI's facility uses permanent and dedicated dilution tunnels that are designed and are maintained to meet the specifications of the dilution tunnel specifications prescribed in ASTM E2515. The dilution tunnel was cleaned on 7/10/23 immediately prior to the test series. Prior to testing, sample point and traverse point locations are verified to ensure their locations are within the prescribed specifications. Collection hood, tunnel diameter, and mixing section length are also verified to be within specifications.

Sampling Systems

The sampling systems consisted of two independent systems, each managing two dry gas meters (a total of four dry gas meters). One of the systems was designated for sampling of Train A and Train B for the duration of test(s), and the other system was designated for sampling of the First Hour emissions and background ambient particulate. These systems were arranged identically to and in accordance with Section 6 of ASTM E2515 with the only exception that the pressure drop through an orifice on the exhaust end of each meter were monitored with a monometer to aid in identifying and responding to changes in the sample flow rates during operation.

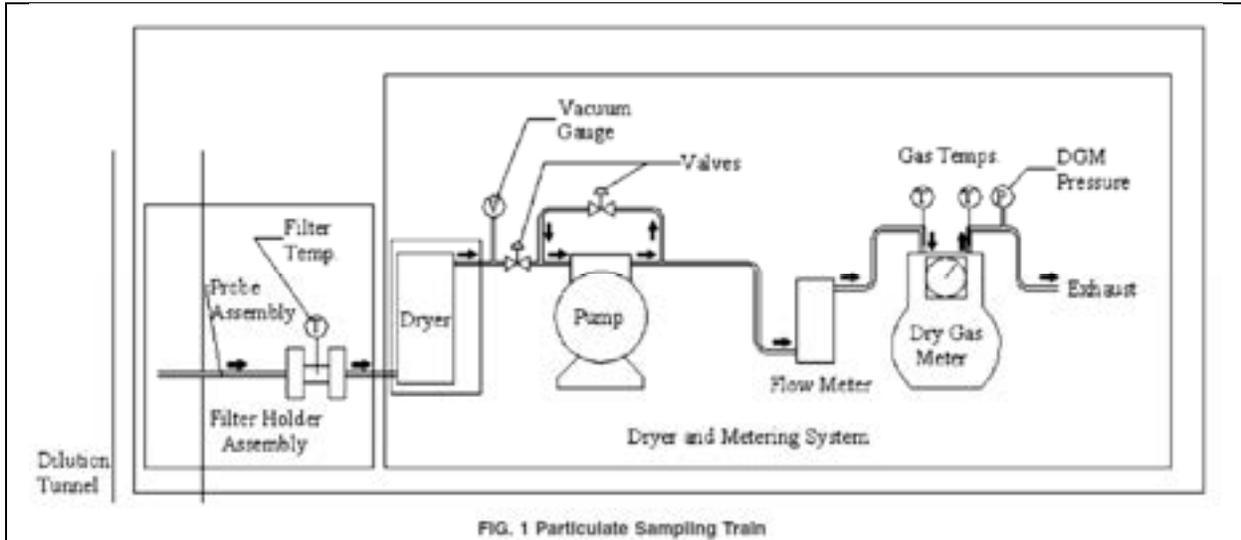

Figure from ASTM E2515 of typical sampling system (showing One gas meter)

**Manufacturer's Written Instructions
(Provided by manufacturer)**

Nova C Lab Instructions

- Open the bypass
- Open the front loading door
- Level the coal bed
- Place test load onto coal bed
- Close the front loading door
- Close the bypass

3. SAMPLING PROCEDURES AND TEST RESULTS

RUN NARRATIVES

Run 1 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 were followed to produce a burn rate of 2.06 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. Negative filter weights were found on train A (post first hour) which was caused by filter material transferring to the O-ring gasket. Transfer weight can be seen as a positive weight on the O-rings. Negative filter is added back into the calculation to offset transfer weight as being counted as emissions. The train precision was found to be unacceptable and so this test run was determined to be invalid and inappropriate for inclusion in the average.

Run 1 Sampling portion Start-up Procedures

- Bypass: Used to load fuel, then closed once the door was shut.
- Fuel Loading: Fuel Loading was completed by 35 seconds.
- Door: Fuel door was open to load fuel then closed at 40 seconds.
- Primary Air: n/a – Single Burn-Rate Appliance (fixed)
- Secondary Air: n/a – Single Burn-Rate Appliance (fixed) No user control for secondary air.

	
Run 1 – Test Fuel	Run 1 – Loaded Stove

Run 2 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 were followed to produce a burn rate of 1.98 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. No negative filter weights were found on either trains A or B nor did any other sampling anomalies occur. This test run was determined to be valid and appropriate for inclusion in the average emissions calculations.

Run 2 Sampling portion Start-up Procedures

- Bypass: Used to load fuel, then closed once door was shut.
- Fuel Loading: Fuel Loading was completed by 40 seconds.
- Door: Fuel door was open to load fuel then closed at 45 seconds.
- Primary Air: n/a – Single Burn-Rate Appliance (fixed)
- Secondary Air: n/a – Single Burn-Rate Appliance (fixed)No user control for secondary air.

Run 2 – Test Fuel

Run 2 – Loaded Stove

Run 3 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 were followed to produce a burn rate of 1.91 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. No negative filter weights were found. Filter temperatures were found to exceed the limitations set forth in ASTM E2780 and therefore the run was determined to be invalid and not appropriate for use.

Run 3 Sampling portion Start-up Procedures

Bypass: Used to load fuel, then closed once door was shut.

Fuel Loading: Fuel Loading was completed by 25 seconds.

Door: Fuel door was open to load fuel then closed at 30 seconds.

Primary Air: n/a – Single Burn-Rate Appliance (fixed)

Secondary Air: n/a – Single Burn-Rate Appliance (fixed)No user control for secondary air.

Run 3 – Test Fuel

Run 3 – Loaded Stove

Run 4 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 followed to produce a burn rate of 2.28 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. No negative filter weights were found. The post-test leak check of the pitot tube and associated plumbing failed and therefore the run was determined to be invalid and not appropriate for use. Although the pitot tube did pass the pre-test leak check, investigation following the post-test failure revealed that a “quick-connect” fitting that had been unplugged and re-plugged prior to the test run and it was not fully and securely seated into its receiving socket causing intermittent leakage.

Run 4 Sampling portion Start-up Procedures

Bypass: Used to load fuel, then closed once door was shut.

Fuel Loading: Fuel Loading was completed by 30 seconds.

Door: Fuel door was open to load fuel then closed at 35 seconds.

Primary Air: n/a – Single Burn-Rate Appliance (fixed)

Secondary Air: n/a – Single Burn-Rate Appliance (fixed) No user control for secondary air.

Run 4 – Test Fuel

Run 4 – Loaded Stove

Run 5 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 were followed to produce a burn rate of 2.11 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. No negative filter weights were found. The proportionality between trains A and B were found to be more than the permitted magnitude permitted by ASTM E2780 and the run was determined to be invalid and not appropriate for use.

Run 5 Sampling portion Start-up Procedures

Bypass: Used to load fuel, then closed once door was shut.

Fuel Loading: Fuel Loading was completed by 30 seconds.

Door: Fuel door was open to load fuel then closed at 35 seconds.

Primary Air: n/a – Single Burn-Rate Appliance (fixed)

Secondary Air: n/a – Single Burn-Rate Appliance (fixed)No user control for secondary air.

Run 5 – Test Fuel

Run 5 – Loaded Stove

Run 6 – Test procedures prescribed within ASTM E2780, ASTM E2515 and CSA B415.1 were followed to produce a burn rate of 1.72 kg/h (no controls available on the appliance as this is a single burn-rate appliance). Sampling was conducted in accordance with ASTM E2515. No negative filter weights were found, nor did any other sampling anomalies occur. This test run was determined to be valid and appropriate for inclusion in the average emissions calculations.

Run 6 Sampling portion Start-up Procedures

Bypass: Used to load fuel, then closed once door was shut

Fuel Loading: Fuel loading started once door was open and was completed at 60 seconds

Door: Fuel Door closed at 65 sec.

Primary Air: n/a – Single Burn-Rate Appliance (fixed)

Secondary Air: n/a – Single Burn-Rate Appliance (fixed)No user control for secondary air.

Run 1 Test Data

Wood Heater Test Results - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire
 Model: Nova C
 Project No.: 0552WS003E
 Tracking No.: 2468
 Run: 1
 Test Date: 07/11/23

Technician Signature: _____

Burn Rate	2.06 kg/hr dry
Average Tunnel Temperature	128 degrees Fahrenheit
Average Gas Velocity in Dilution Tunnel - vs	21.87 feet/second
Average Gas Flow Rate in Dilution Tunnel - Qsd	13647.6 dscf/hour
Average Delta p	0.104 inches H2O
Total Time of Test	141 minutes

	AMBIENT	SAMPLE TRAIN 1	SAMPLE TRAIN 2	FIRST HOUR FILTER (TRAIN 1)		
Total Sample Volume - Vm	22.024 cubic feet	22.785 cubic feet	22.431 cubic feet	9.605 cubic feet		
Average Gas Meter Temperature	83 degrees Fahrenheit	92 degrees Fahrenheit	93 degrees Fahrenheit	88 degrees Fahrenheit		
Total Sample Volume (Standard Conditions) - Vms	21.746 dscf	22.115 dscf	21.886 dscf	9.375 dscf		
Total Particulates - m _p	0.1 mg	6 mg	3.4 mg	0 mg		
Particulate Concentration (dry-standard) - C _p /C _s	0.000005 grams/dscf	0.00027 grams/dscf	0.00016 grams/dscf	0.00000 grams/dscf		
Total Particulate Emissions - E _T	0.15 grams	8.55 grams	4.83 grams	0.00 grams		
Particulate Emission Rate	0.06 grams/hour	3.64 grams/hour	2.06 grams/hour	0.00 grams/hour		
Emissions Factor		1.77 g/kg	1.00 g/kg	0.00 g/kg		
Difference from Average Total Particulate Emissions		1.86 grams	1.86 grams			
Final Average Results		Quality Checks				
		Requirement	Measured / Observed			
			First Hour	Train 1	Train 2	Complies?
Complete Test Run						
Total Particulate Emissions - E _T	6.69 grams	Filter Temps, °F	86	86	88	OK
Particulate Emission Rate	2.85 grams/hour	Filter Face Velocity, fpm	8.73	8.78	8.78	OK
Emissions Factor	1.38 grams/kg	Dryer Exit Temp, °F	60	60	49	OK
		Leakage Rate, cfm < 4% of avg sample rate or < 0.01 cfm, lesser of the two	0.000	0.001	0.001	OK
		Neg. Probe Weight	0	0	0	OK
First Hour Emissions						
Total Particulate Emissions - E _T	0.00 grams	< 90 for < 10% of θ	0.00%	0.00%	0.00%	OK
Particulate Emission Rate	0.00 grams/hour	> 110 for < 10% of θ	0.00%	0.00%	0.00%	OK
Emissions Factor	0.00 grams/kg	# Readings < 80%	0	0	0	OK
		# Readings > 120%	0	0	0	OK
7.5% of Average Total Particulate Emissions	0.50 grams	Ambient Temp, °F		81		OK
		(min / max)		85		OK
		Train Precision		27.8%		Unacceptable
		One of A or B must conform		0.77		
		Stove Surface ΔT		52		OK
		Room Air Velocity		16		OK

Run: 1

Manufacturer: MF Fire
Model: Nova C
Tracking No.: 2483
Project No.: 05216500E
Technician: JAC

Total Sampling Time: 141 min
Recording Interval: 6 min
Total Volume: 22.024 cubic feet
Background Sample Volume: 22.024 cubic feet

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)

Table with 2 columns: Room Air Velocity (ft/min) and Average (ft/min). Values: 30.08, 30.03, 30.05, 16.

Table with 2 columns: Barometric Pressure (in Hg) and Average (in Hg). Values: 30.08, 30.03, 30.05.

OMNI Equipment Numbers:

Wood Heater Test Data

PM Control Modules: 335,338
Dilution Tunnel MM(dry): 29.00 Inlb-mole
Dilution Tunnel MM(wet): 29.73 Inlb-mole
Dilution Tunnel CO: 2.00 ppm
Dilution Tunnel H2O: 10.00 ppm
Tunnel Area: 0.18535 ft2
Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 21.87 ft/sec.
Initial Tunnel Flow: 224.3 scfm
Average Chamber Flow: 227.8 scfm
Post-Test Leak Check (1): 0.001 cfm @ 6 in. Hg
Post-Test Leak Check (2): 0.001 cfm @ 10 in. Hg
Post-Test Leak Check (3): 0.001 cfm @ 11 in. Hg
Average Test Piece Fuel Moisture: 19.16 Dry Basis %

Table with 8 columns: P1.1, P1.2, P1.3, P1.4, P1.5, P1.6, P1.7, P1.8, Center. Rows include Fuel Weight Change, Pro. Rate Pro. Rate 2, Dilution Tunnel Center dp, etc.

Table with 8 columns: P1.1, P1.2, P1.3, P1.4, P1.5, P1.6, P1.7, P1.8, Center. Rows include H2O, F, Fp.

Main test data table with 13 columns: Elapsed Time (min), Gas Meter 1 (ft3), Gas Meter 2 (ft3), Sample Rate 1 (cfm), Sample Rate 2 (cfm), Office dH1 (H2O), Office dH2 (H2O), Meter 1 Vacuum (Hhg), Meter 2 Vacuum (Hhg), Meter 2 Temp (F), Dilution Tunnel (F), Dilution Tunnel Center dp, Pro. Rate Pro. Rate 2, Fuel Weight Scale Reading, Fuel Weight Change, Firebox Bottom, Firebox Back, Firebox Left, Firebox Right, Avg. Stove Surface Temperature (F), Catalyst Exit, Stack, Filter 1, Filter 2, Dryer Exit 1, Dryer Exit 2, Ambient, Draft (H2O), CO2 (%), CO (%).

Wood Heater Test Data

Run: 1

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 00716500E
 Beginning Clock Time: 13:38

Total Sampling Time: 141 min
 Recording Interval: 6 min
 Total Onboard Fuel: 6 gal
 Background Sample Volume: 22,024 cubic feet

PM Control Modules: 335,338
 Dilution Tunnel MM(dry): 29.00 Inb-mole
 Dilution Tunnel MM(wet): 28.73 Inb-mole
 Dilution Tunnel CO: 2.00 Inb-mole
 Dilution Tunnel H₂O: 2.00 Inb-mole
 Tunnel Area: 0.18335 ft²
 Pilot Tube Cp: 0.59
 Avg. Tunnel Velocity: 21.87 ft/sec.
 Initial Tunnel Flow: 224.33 scfm
 Average Chamber Flow: 227.83 scfm
 Post-Test Leak Check (1): 0.001 cfm @ 6 in. Hg
 Post-Test Leak Check (2): 0.001 cfm @ 10 in. Hg
 Post-Test Leak Check (3): 0.001 cfm @ 11 in. Hg
 Average Test Piece Fuel Moisture: 19.16 Dry Basis %

Technician Signature: _____

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)

Barometric Pressure:	Begin	Middle	End	Average
	30.08	30.03	30.03	30.05

Room Air Velocity: 16

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: Nova C _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 1 _____
 Date: 7/11/23 _____

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E985	123.5	118.3	5.2
C. Rear filter catch	Filter	E986	118.2	118.3	-0.1
D. Probe catch*	Probe	13	114321.5	114321.5	0.0
E. Filter seals catch*	Seals	S526	3321.0	3320.1	0.9

Sub-Total Total Particulate, mg: 6.0

Train 1 Aggregate Total Particulate, mg: 6.0

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	E987	122.8	117.9	4.9
B. Rear filter catch	Filter	E988	116.3	118.1	-1.8
C. Probe catch*	Probe	35	114327.4	114327.4	0.0
D. Filter seals catch*	Seals	S527	3269.4	3269.1	0.3

Total Particulate, mg: 3.4

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	E989	117.8	117.7	0.1

Total Particulate, mg: 0.1

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Test Data

U

Run: **1**
 Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 037476500E
 Beginning Clock Time: 13:38

PM Control Modules: 335,338
 Dilution Tunnel MM(dry): 29.00 Inlb-mole
 Dilution Tunnel MM(wet): 28.73 Inlb-mole
 Dilution Tunnel WC: 2.00 Inlb-mole
 Dilution Tunnel H₂O: 2.00 Inlb-mole
 Tunnel Area: 0.14835 ft²
 Pilot Tube Cp: 0.59
 Average Test Piece Fuel Moisture: 19.16 % Dry Basis %

Avg. Tunnel Velocity: 22.23 ft/sec.
 Initial Tunnel Flow: 224.3 scfm
 Average Chamber Temp: 227.6 °C
 Post-Test Leak Check (1): 0.001 cfm @ 6 in. Hg
 Post-Test Leak Check (2): 0.001 cfm @ 10 in. Hg
 Post-Test Leak Check (3): 0.001 cfm @ 11 in. Hg

Technician Signature: _____

Meter Box Y Factor:		(1)	1.015	(2)	1.012	(Amb)
Biometric Pressure:	Begin	30.08	30.03	30.03	30.05	Room Air Velocity, fpm
	Middle					16
	End

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire	Equipment Numbers: _____
Model: Nova C	_____
Tracking No.: 2468	_____
Project No.: 0552WS003E	_____
Run #: 1	_____
Date: 7/11/23	_____

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E983	122.8	117.6	5.2
C. Rear filter catch	Filter	E984	119.3	119.2	0.1
D. Probe catch*	Probe	24	114128.5	114128.5	0.0
E. Filter seals catch*	Seals	S525	3283.2	3282.6	0.6

Sub-Total	Total Particulate, mg:	5.9
------------------	------------------------	-----

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total	Total Particulate, mg:	0.0
------------------	------------------------	-----

Train 1 Aggregate	Total Particulate, mg:	5.9
--------------------------	------------------------	-----

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg:	0.0
-------------------------------	------------

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg:	0.0
-------------------------------	------------

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Wood Heater Test Data

Run: 2

Manufacturer: MF Fire
 Model: Nova3C
 Tracking No.: 2483
 Project No.: 220716500E
 Serial No.: 220716523
 Beginning Clock Time: 12:20

PM Control Modules: 335,338
 Dilution Tunnel MM(dry): 29.00 Inlb-mole
 Dilution Tunnel MM(wet): 28.73 Inlb-mole
 Dilution Tunnel CO: 2.00 ppm
 Tunnel Area: 0.18335 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 22.83 ft/sec.
 Initial Tunnel Flow: 235.8 scfm
 Average Chamber Temp: 2000 °F
 Post-Test Leak Check (1): 0.001 cfm @ 17 in. Hg
 Post-Test Leak Check (2): 0.001 cfm @ 16 in. Hg
 Average Test Piece Fuel Moisture: 19.91 Dry Basis %

Technician Signature: _____

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)

Room Air Velocity: 14.5 fpm

Biometric Pressure: Begin 30.06 Middle 30.03 Average 30.05

OMNI Equipment Numbers: _____

Wood Heater Test Data

Run: **2** Manufacturer: MF Fire
 Model: Nova3C
 Tracking No.: 2483
 Project No.: 19276500E
 Beginning Clock Time: 12:20

PM Control Modules: 335.338
 Dilution Tunnel MM(dry): 29.00
 Dilution Tunnel MM(wet): 28.78
 Dilution Tunnel Scale: 2.00
 Tunnel Area: 0.18635 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 22.83 ft/sec
 Initial Tunnel Flow: 235.8 scfm
 Average Chamber Flow: 230.07 scfm
 Post-Test Leak Check (1): 0.001 cfm @ 17 in. Hg
 Post-Test Leak Check (2): 0.001 cfm @ 16 in. Hg
 Average Test Piece Fuel Moisture: 19.91 Dry Basis %

Total Sampling Time: 140 min
 Recording Interval: 6 min
 Total Volume: 22,024 cubic feet
 Background Sample Volume: 22,024 cubic feet

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: 637,283A,716
 Model: NovaC _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 2 _____
 Date: 7/12/23 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E992	121.0	118.4	2.6
C. Rear filter catch	Filter	E993	118.1	118.0	0.1
D. Probe catch*	Probe	21	114390.2	114390.2	0.0
E. Filter seals catch*	Seals	S529	3424.6	3424.3	0.3

Sub-Total Total Particulate, mg: 3.0

Train 1 Aggregate Total Particulate, mg: 3.0

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	E994	121.3	118.7	2.6
B. Rear filter catch	Filter	E995	118.0	117.9	0.1
C. Probe catch*	Probe	61	118127.7	118127.7	0.0
D. Filter seals catch*	Seals	S530	3302.0	3301.8	0.2

Total Particulate, mg: 2.9

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	E996	117.7	117.7	0.0

Total Particulate, mg: 0.0

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: NovaC _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 2 _____
 Date: 7/12/23 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E990	121.1	118.2	2.9
C. Rear filter catch	Filter	E991	117.9	117.9	0.0
D. Probe catch*	Probe	73	117070.5	117070.5	0.0
E. Filter seals catch*	Seals	S528	3407.0	3407.0	0.0

Sub-Total Total Particulate, mg: 2.9

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

Train 1 Aggregate Total Particulate, mg: 2.9

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg: 0.0

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg: 0.0

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Technician Signature: _____

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Wood Heater Test Data

Run: **3**

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 20220303E
 Test No.: 7122323
 Beginning Clock Time:

Total Sampling Time: 151 min
 Recording Interval: 6 min
 Test Duration: 151 min
 Background Sample Volume: 24,184 cubic feet

PM Control Modules:
 Dilution Tunnel MM(dry): 23.06 lbib-mole
 Dilution Tunnel MM(wet): 232.3 lbib-mole
 Dilution Tunnel CO: 2.00 ppm
 Dilution Tunnel H₂O: 1.00 %
 Tunnel Area: 0.18335 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 23.06 ft/sec.
 Initial Tunnel Flow: 232.3 scfm
 Average Chamber Temp: 238.1 °C
 Post-Test Leak Check (1): 466 @ 1 in. Hg
 Post-Test Leak Check (2): 466 @ 1 in. Hg
 Average Test Piece Fuel Moisture: 21.04 Dry Basis %

Wood Heater Test Data

U

Run: 3

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 202205003E
 Beginning Date: 7/12/2023
 Beginning Clock Time: _____

PM Control Modules:
 Dilution Tunnel MM(dry): 23.06 ft/sec.
 Dilution Tunnel MM(wet): 232.3 ft/dm
 Dilution Tunnel CO: 2.00 ppm
 Dilution Stack: 0.148335 ft/sec @ _____ in. Hg
 Tunnel Area: 0.148335 ft²
 Pilot Tube Cp: 0.59
 Average Test Piece Fuel Moisture: 21.04 Dry Basis %

Technician Signature: _____

Avg. Tunnel Velocity: _____ ft/sec.
 Initial Tunnel Flow: _____ scfm
 Average Chamber Temp: _____ °F
 Post-Test Leak Check (1): _____ in. Hg
 Post-Test Leak Check (2): _____ in. Hg

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: Nova C _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 3 _____
 Date: 7.12.2023 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E997	122.3	118.5	3.8
C. Rear filter catch	Filter	E998	118.1	118.1	0.0
D. Probe catch*	Probe	OES5	113570.5	113570.2	0.3
E. Filter seals catch*	Seals	S531	3381.0	3381.0	0.0

Sub-Total Total Particulate, mg: 4.1

Train 1 Aggregate Total Particulate, mg: 4.1

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	E999	122.1	118.2	3.9
B. Rear filter catch	Filter	F000	117.7	117.6	0.1
C. Probe catch*	Probe	OES6	113710.2	113710.0	0.2
D. Filter seals catch*	Seals	S531	3362.8	3362.8	0.0

Total Particulate, mg: 4.2

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter		118.4	118.2	0.2

Total Particulate, mg: 0.2

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Test Data

Run: **3**

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 20220503E
 Test Date: 7/12/2023
 Beginning Clock Time: _____

Total Sampling Time: 60 min
 Recording Interval: 6 min
 Test Duration: _____ min
 Background Sample Volume: 24,184 cubic feet

PM Control Modules: 371.338
 Dilution Tunnel MM(dry): 29.00 Inlb-mole
 Dilution Tunnel MM(wet): 28.73 Inlb-mole
 Dilution Tunnel Flow: 240.33 scfm
 Dilution Tunnel Area: 3.70 sqft
 Tunnel Area: 0.18535 ft²
 Pilot Tube Cp: 0.59
 Post-Test Leak Check (1): _____ in. Hg
 Post-Test Leak Check (2): _____ in. Hg
 Average Test Piece Fuel Moisture: 21.04 Dry Basis %

Avg. Tunnel Velocity: _____ ft/sec.
 Initial Tunnel Flow: _____ scfm
 Average Chamber Temp: _____ in. Hg
 Post-Test Leak Check (1): _____ in. Hg
 Post-Test Leak Check (2): _____ in. Hg
 Average Test Piece Fuel Moisture: _____ Dry Basis %

Technician Signature: _____

Meter Box Y Factor: (1) 1.015 (2) 1.012 (Amb)	
Biometric Pressure:	Room Air Velocity (ft/min)
Begin 29.88	16
Middle 30.00	
End 29.89	
Average 30.00

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: Nova C _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 3 _____
 Date: 7.12.2023 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F001	122.1	118.1	4.0
C. Rear filter catch	Filter	F003	118.4	118.3	0.1
D. Probe catch*	Probe	75	117638.0	117637.9	0.1
E. Filter seals catch*	Seals	S531	3435.8	3435.2	0.6

Sub-Total Total Particulate, mg: 4.8

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

Train 1 Aggregate Total Particulate, mg: 4.8

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg: 0.0

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg: 0.0

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Wood Heater Test Data

Run: 4

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 130716500E
 Serial No.: 130716523
 Beginning Clock Time: 13:05

Total Sampling Time: 123 min
 Recording Interval: 6 min
 Total Sample Volume: 18.836 cubic feet
 Background Sample Volume: 18.836 cubic feet

PM Control Modules: 335.338
 Dilution Tunnel MM(dry): 29.00
 Dilution Tunnel MM(wet): 28.73
 Dilution Tunnel SC: 2.00
 Tunnel Area: 0.14835 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 22.94 ft/sec.
 Initial Tunnel Flow: 240.3 scfm
 Average Chamber Flow: 239.8 scfm
 Post-Test Leak Check (1): 0.003 cfm @ 18 in. Hg
 Post-Test Leak Check (2): 0.003 cfm @ 17 in. Hg
 Average Test Piece Fuel Moisture: 20.23 % Dry Basis %

Technician Signature: _____

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)			
Barometric Pressure: _____			
Begin	Middle	End	Average
30.14	30.14	30.14	30.14
Room Air Velocity: _____		10

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire	Equipment Numbers: _____
Model: Nova C	_____
Tracking No.: 2468	_____
Project No.: 0552WS003E	_____
Run #: 4	_____
Date: 7/13/23	_____

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total	Total Particulate, mg:	0.0
------------------	------------------------	-----

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F007	123.7	117.4	6.3
C. Rear filter catch	Filter	F008	117.2	117.1	0.1
D. Probe catch*	Probe	37	114466.4	114466.2	0.2
E. Filter seals catch*	Seals	5535	3350.5	3350.3	0.2

Sub-Total	Total Particulate, mg:	6.8
------------------	------------------------	-----

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	F009	122.9	116.2	6.7
B. Rear filter catch	Filter	F010	117.5	117.4	0.1
C. Probe catch*	Probe	36	114884.1	114883.9	0.2
D. Filter seals catch*	Seals	5536	4147.8	4147.4	0.4

Total Particulate, mg:	7.4
-------------------------------	------------

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	F011	116.4	116.4	0.0

Total Particulate, mg:	0.0
-------------------------------	------------

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Run #: 4	_____
Date: 7/13/23	_____

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F005	124.3	118.0	6.3
C. Rear filter catch	Filter	F006	117.4	117.3	0.1
D. Probe catch*	Probe	70	116834.4	116834.0	0.4
E. Filter seals catch*	Seals	5534	3290.5	3290.2	0.3

Sub-Total	Total Particulate, mg:	7.1
------------------	------------------------	-----

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total	Total Particulate, mg:	0.0
------------------	------------------------	-----

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg:	0.0
-------------------------------	------------

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg:	0.0
-------------------------------	------------

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Test Data

Run: **5**

Manufacturer: MF Fire
 Model: Nova C
 Tracking No.: 2483
 Project No.: 20240500E
 Technician: JTB
 Beginning Clock Time: 11:14

Total Sampling Time: 134 min
 Recording Interval: 6 min
 Total Volume: 20,543 cubic feet
 Background Sample Volume: 20,543 cubic feet

PM Control Modules: 335,338
 Dilution Tunnel MM(dry): 29.00 lbb-mole
 Dilution Tunnel MM(wet): 28.73 lbb-mole
 Dilution Tunnel CO: 2.00 ppm
 Dilution Tunnel H₂O: 1.00 ppm
 Tunnel Area: 0.18335 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 16.72 ft/sec.
 Initial Tunnel Flow: 202.9 lbbm
 Average Chamber Temp: 200.00 °C
 Post-Test Leak Check (1): 0.004 cfm @ 16 in. Hg
 Post-Test Leak Check (2): 0.003 cfm @ 23 in. Hg
 Average Test Piece Fuel Moisture: 21.12 % Dry Basis

 Run #: 5 _____
 Date: 7/17/23 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F014	120.2	116.4	3.8
C. Rear filter catch	Filter	F015	117.6	117.4	0.2
D. Probe catch*	Probe	17	114562.2	114562.0	0.2
E. Filter seals catch*	Seals	S538	3277.4	3277.3	0.1

Sub-Total Total Particulate, mg: 4.3

Train 1 Aggregate Total Particulate, mg: 4.3

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	F016	120.4	116.9	3.5
B. Rear filter catch	Filter	F017	116.9	116.8	0.1
C. Probe catch*	Probe	50	118126.7	118126.6	0.1
D. Filter seals catch*	Seals	S539	3350.8	3350.8	0.0

Total Particulate, mg: 3.7

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	F018	116.1	116.2	0.0

Total Particulate, mg: 0.0

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: Nova C _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 5 _____
 Date: 7/17/23 _____

TRAIN 1 (First Hour emissions)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F012	119.3	115.9	3.4
C. Rear filter catch	Filter	F013	117.7	117.6	0.1
D. Probe catch*	Probe	31	114363.2	114362.5	0.7
E. Filter seals catch*	Seals	S539	3314.4	3314.3	0.1

Sub-Total Total Particulate, mg: 4.3

TRAIN 1 (Post First Hour Change-out)

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

Train 1 Aggregate Total Particulate, mg: 4.3

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg: 0.0

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg: 0.0

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Technician Signature: _____

OMNI-Test Laboratories

Manufacturer: MF Fire
Model: Nova C
Date: 07/17/23
Run: 5
Control #:
Test Duration: 134
Output Category: SBR

Technicians: _____

Test Results in Accordance with CSA B415.1-10

	HHV Basis	LHV Basis
Overall Efficiency	72.0%	77.8%
Combustion Efficiency	96.0%	96.0%
Heat Transfer Efficiency	75%	81.1%

Output Rate (kJ/h)	30,375	28,814	(Btu/h)
Burn Rate (kg/h)	2.13	4.69	(lb/h)
Input (kJ/h)	42,175	40,008	(Btu/h)

Test Load Weight (dry kg)	4.75	10.48	dry lb
MC wet (%)	16.83		
MC dry (%)	20.24		
Particulate (g)	0		
CO (g)	276		
Test Duration (h)	2.23		

Emissions	Particulate	CO
g/MJ Output	0.00	4.07
g/kg Dry Fuel	0.00	58.01
g/h	0.00	123.51
lb/MM Btu Output	0.00	9.45

Air/Fuel Ratio (A/F)	12.41

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Wood Heater Test Data

U

Run: 6
 Manufacturer: MF Fire
 Model: Nova3C
 Tracking No.: 2483
 Project No.: 192706500E
 Beginning Clock Time: 11:04:29

Total Sampling Time: 155 min
 Recording Interval: 5 min
 Total Volume: 6.000 cubic feet
 Background Sample Volume: 24.943 cubic feet

PM Control Modules: 335,338
 Dilution Tunnel MM(dry): 29.00 Inb-mole
 Dilution Tunnel MM(wet): 28.73 Inb-mole
 Dilution Tunnel CO: 2.00 Inb-mole
 Dilution Tunnel H₂O: 2.00 Inb-mole
 Tunnel Area: 0.18535 ft²
 Pilot Tube Cp: 0.59

Avg. Tunnel Velocity: 16.77 ft/sec.
 Initial Tunnel Flow: 194.9 scfm
 Average Chamber Temp: 400.00 °C
 Post-Test Leak Check (1): 0.003 cfm @ 5 in. Hg
 Post-Test Leak Check (2): 0.003 cfm @ 7 in. Hg
 Average Test Piece Fuel Moisture: 20.57% Dry Basis %

Technician Signature: _____

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)	
Barometric Pressure:	Room Air Velocity: 27
Begin: 29.99	Average: 29.98
End: 29.96	End: 29.98

OMNI Equipment Numbers:

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire	Equipment Numbers: _____
Model: NovaC	_____
Tracking No.: 2468	_____
Project No.: 0552WS003E	_____
Run #: 6	
Date: 8/15/23	

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Total Particulate, mg:	0.0
------------------------	-----

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F46	126.6	123.3	3.3
C. Rear filter catch	Filter	F47	123.6	123.6	0.0
D. Probe catch*	Probe	74	117665.3	117665.2	0.1
E. Filter seals catch*	Seals	5560	4121.3	4120.6	0.7

Total Particulate, mg:	4.1
------------------------	-----

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	F48	128.8	124.9	3.9
B. Rear filter catch	Filter	F49	123.2	123.0	0.2
C. Probe catch*	Probe	81	111860.5	111860.5	0.0
D. Filter seals catch*	Seals	5561	3348.7	3348.6	0.1

Total Particulate, mg:	4.2
------------------------	-----

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	F50	125.2	125.1	0.1

Total Particulate, mg:	0.1
------------------------	-----

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: NovaC _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 6 _____
 Date: 8/15/23 _____

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	F44	129.8	124.9	4.9
C. Rear filter catch	Filter	F45	123.2	123.2	0.0
D. Probe catch*	Probe	32	114743.2	114743.1	0.1
E. Filter seals catch*	Seals	S559	3389.1	3389.1	0.0

Total Particulate, mg:	5.0
------------------------	-----

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Total Particulate, mg:	0.0
------------------------	-----

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0

Total Particulate, mg:	0.0
------------------------	-----

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter				0.0

Total Particulate, mg:	0.0
------------------------	-----

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

Technician Signature: _____

OMNI-Test Laboratories

Manufacturer: MF Fire
Model: Nova C
Date: 08/15/23
Run: 6
Control #: 3468
Test Duration: 155
Output Category: SBR

Technicians: _____

Test Results in Accordance with CSA B415.1-10

	HHV Basis	LHV Basis
Overall Efficiency	69.5%	75.1%
Combustion Efficiency	98.0%	98.0%
Heat Transfer Efficiency	71%	76.6%

Output Rate (kJ/h)	23,654	22,438	(Btu/h)
Burn Rate (kg/h)	1.72	3.79	(lb/h)
Input (kJ/h)	34,052	32,302	(Btu/h)

Test Load Weight (dry kg)	4.44	9.79	dry lb
MC wet (%)	17.06		
MC dry (%)	20.57		
Particulate (g)	4.86		
CO (g)	143		
Test Duration (h)	2.58		

Emissions	Particulate	CO
g/MJ Output	0.08	2.33
g/kg Dry Fuel	1.09	32.10
g/h	1.88	55.17
lb/MM Btu Output	0.18	5.42

Air/Fuel Ratio (A/F)	14.56

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

ASTM E2780 Wood Heater Run Sheets

Client: MF Fire Project Number: 0552WS003E Run Number: 6
 Model: Small Tracking Number: _____ Date: 08/15/2023
 Test Crew: R Tiegs
 OMNI Equipment ID numbers: _____

Wood Heater Run Notes

Air Control Settings

Primary:

FIXED (SBR)

Secondary: N/A

Tertiary/Pilot: N/A

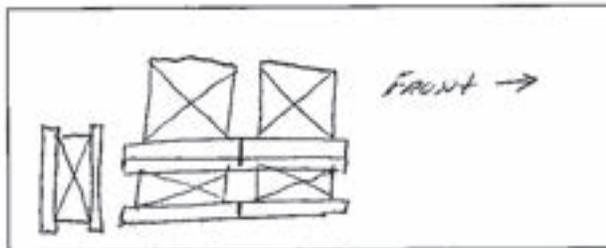

Fan: N/A

Preburn Notes

Time	Notes
0843	Pre burn fuel loaded at 2.4 lbs
0943	Missed coal bed range
0950	Additional pre burn fuel moisture 20.1, 19.9, 20.1
1053	At 68 min added additional 8.4 lbs
1102	PB stopped

Test Notes

Sketch test fuel configuration:

Start up procedures & Timeline:

Bypass: Used
 Fuel loaded by: 60
 Door closed at: 65
 Primary air: N/A

Notes: _____

Time	Notes
1104	TEST start
1204	1st hour sampling stopped
1339	TEST done
1406	Bias check nitrogen O: 0.01, ppm: 1 CO: 0.003, CO ₂ 0.02

5. APPLIANCE ENGINEERING DRAWINGS

(CBI Report Only)

6. APPLIANCE LABELING AND OWNER'S MANUAL

DO NOT REMOVE THIS LABEL Contact local building or fire officials about installation and restrictions in your area. Suitable for use in a conventional residential installation. For use with solid wood fuel only.

Nova C
Model #003
Serial Number

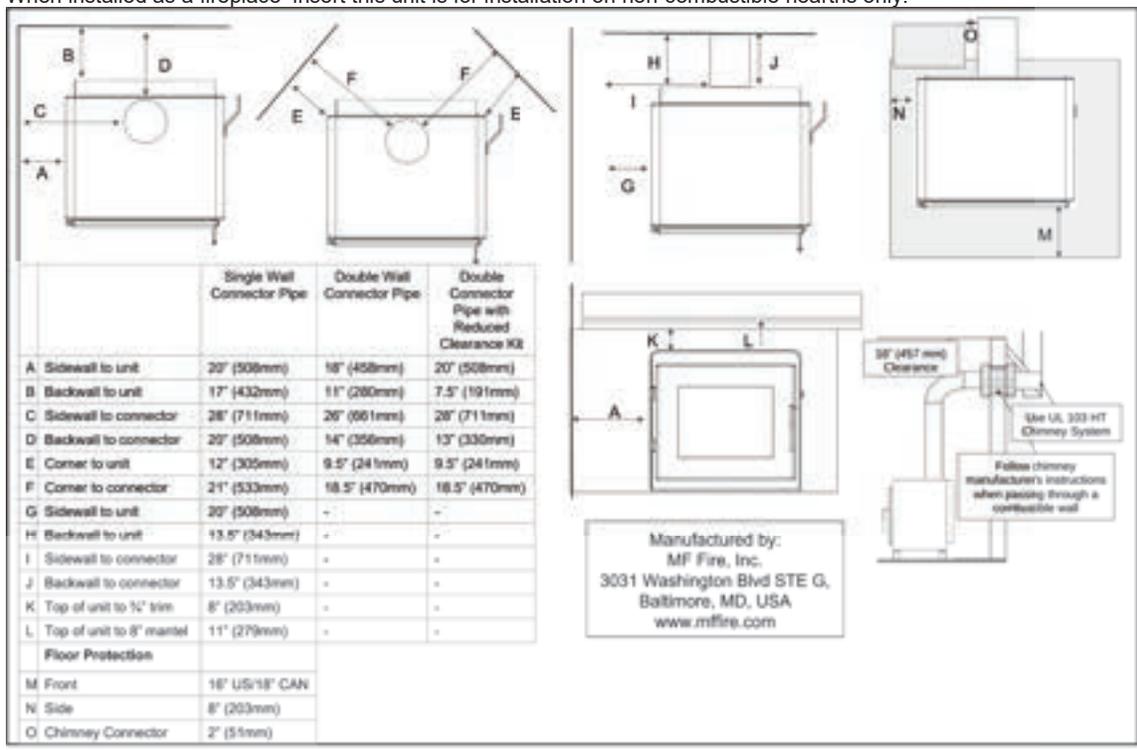

Solid Fuel Room Heater
Report Number 0552WS003E

Tested to UL 1482 – 2011(R2015),
ULC-S627-00 (R2016), and ULC
S628-93 (R2016)

Prevent House Fires: Install and use only in accordance with the manufacturer's installation and operating instructions found in the Owner's Manual. Contact your local building or fire officials about restrictions and installation inspection in your area. Refer to local building codes and manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Do not run a chimney connector through a combustible wall or ceiling. Do not connect this unit to a chimney flue serving another appliance. Clearances may be reduced by methods specified in NFPA 211, listed wall shields, pipe shields, or other means approved by local building or fire officials. Do not overfire, if the chimney connector glows, you are overfiring. Inspect and clean chimney frequently – under certain conditions of use creosote buildup may occur rapidly. Do not use grate or elevate fire – build wood directly on hearth.

This wood heater contains a catalytic combustor, which needs periodic inspection and replacement for proper operation. Consult the Owner's Manual for further information. It is against the law to operate this wood heater in a manner inconsistent with operating instructions in the Owner's Manual, or if the catalytic element is deactivated or removed. CAUTION: the catalytic combustor used in this appliance (part #38) is fragile and must be handled carefully. Burn only dry wood. The burning of metal foils, plastic, garbage, sulphur and diesel oil will render the catalyst in the combustor inactive. The performance and durability of the catalytic combustor has not been evaluated as part of the certification.

Standard residential freestanding installations require a 6" diameter, minimum 24 MSG black chimney connector pipe with listed UL-103 HT factory-built chimney, suitable for use with solid fuels or masonry chimney. If installed on a combustible floor, a noncombustible floor protector must be used. Floor protection must be made of a non-combustible material and at least 0.018" (0.45 mm) thick. For a Nova C equipped with 6" legs and 6" ash lip, Nova C equipped with 9" legs, and for all Nova C Tower configurations, only Type 1 ember protection is required. For Nova C equipped with 3" legs, Type 2 thermal protection with minimum R-value of 1.35 is required. Do not obstruct the space beneath the heater. Operate with doors closed. The unit must be installed with provided legs or tower when installed as a free-standing stove. When installed as a fireplace insert this unit is for installation on non-combustible hearths only.

Replace glass only with 5 mm ceramic glass

CAUTION
HOT WHILE IN OPERATION. DO NOT TOUCH. KEEP CHILDREN, CLOTHING AND FURNITURE AWAY. CONTACT MAY CAUSE SKIN BURNS. SEE NAME-PLATE AND INSTRUCTIONS.

U.S. ENVIRONMENTAL PROTECTION AGENCY

Certified to comply with 2020 particulate emission standards for single burn rate heaters. This single burn rate wood heater is not approved for use with a flue damper. Certified average emissions rate of 1.9 g/hr, tested to EPA Method 28R and ASTM E2515-11

DATE OF MANUFACTURE: _____

NOVA C AND NOVA C TOWER OWNER'S MANUAL

Safety Notice: Please save these instructions for future reference. Please check our website for the most up to date version of this manual. Please read this entire manual before you install and use your new room heater. Failure to follow instructions may result in property damage, bodily injury, or even death. Contact local building or fire officials about restrictions and installation inspection requirements in your area. Do not install Nova C in a mobile home!

Safety Precautions

Installation

Nova C must be properly installed to prevent house fires. Please strictly adhere to the installation instructions.

Nova C must be connected to a listed high temperature chimney or approved masonry chimney with liner.

We recommend you use smoke and CO detectors.

Do not connect this unit to a chimney flue serving another appliance.

Contact your local building officials to obtain information on any local wood stove installation requirements.

Carefully route all power cords through to avoid contact with hot stove surfaces.

Do not connect to or use Nova C in conjunction with any air distribution ductwork unless specifically approved for such installations.

Operation

Nova C is hot while in operation. Keep children, clothing and furniture away as contact may cause skin burns.

Do not touch Nova C while hot. Young children should be supervised around Nova C.

Keep all flammable objects (fabrics, paper, wood, etc.) at least 1 yd (1 m) from the front of the Nova C.

Nova C has been designed for the burning of cordwood only. Do not attempt to burn any other type of fuel in Nova C.

Do not burn garbage or flammable fluids such as gasoline, naphtha or engine oil.

Do not use chemicals or fluids to start the fire.

Never use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in this stove. Keep all such liquids well away from the stove while it is in use.

The viewing door of Nova C must be shut and latched during operation.

Do not use additional grates, andirons, or other means for supporting the fuel.

Never obstruct airflow through the inlet vents or exhaust vents.

This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.

Never over-fire Nova C, as it could lead to a house fire. If the unit or chimney connector glows, you have over-fired the unit.

This wood heater contains a catalytic combustor, which needs periodic inspection and replacement for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual, or if the catalytic element is deactivated or removed.

Maintenance

Allow Nova C to cool before conducting any maintenance.

Never attempt to modify or repair the appliance beyond instructions given in this manual.

Empty the ash regularly and dispose of it in a metal container with a tight lid.

Inspect the chimney connector at least twice monthly.

Features and Specifications

Configurations

Nova C

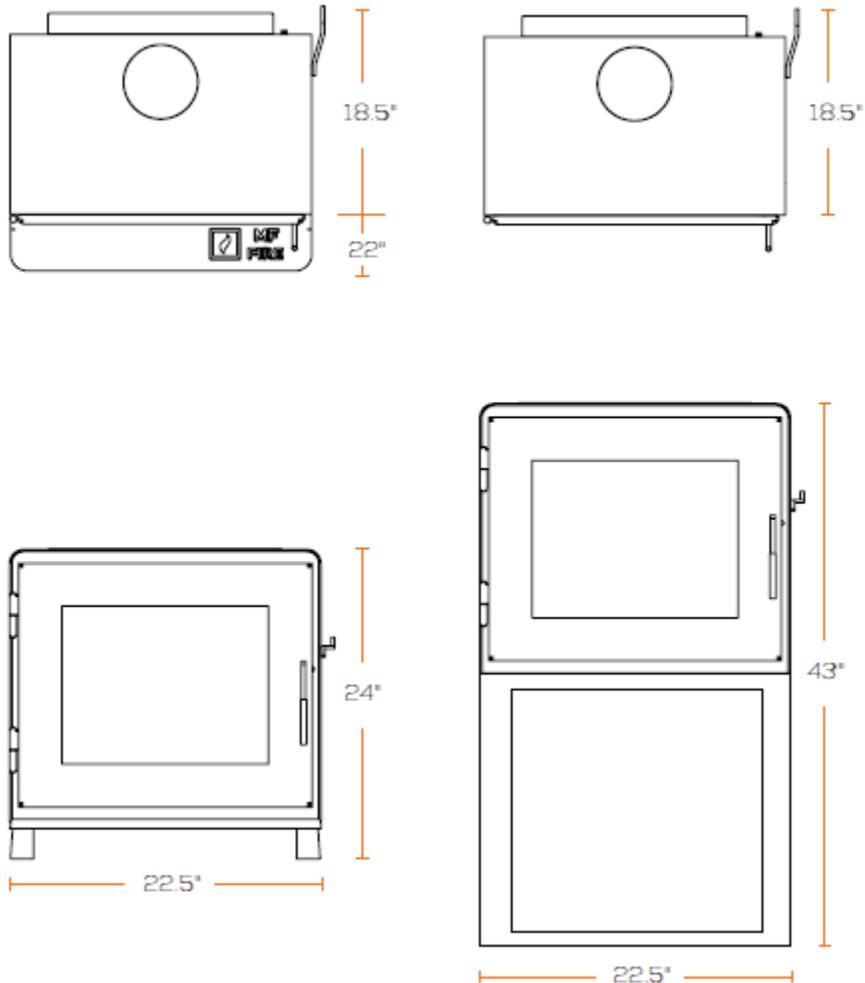

Nova C Tower

Nova C is available in two configurations, Nova C and Nova C Tower. Nova C can be optionally equipped with 3" (standard, shown above), 6", or 9" legs. Nova C Tower is available with no legs (standard, shown above) or 6" legs.

Additionally, both Nova C and Nova C Tower can be used in either a rear vent or a top vent configuration, to best fit your home and preferences.

Dimensions

Dimensions shown are for the standard configurations. All clearances, front, side, corner, back and top, are measured from the largest dimensions.

Heating Specifications

Nova C is equipped with a 1.7 ft.³ firebox and accepts logs up to 18" in length.

Nova C has a 1,500 sq. ft. (175 m²) approximate maximum heating capacity. Heating capacity will vary depending on the home's floor plan, degree of insulation, and the outside temperature.

NOVA C TOWER

Height with tower	43"
Width (w/o bypass)	22.5"
Width (w/ bypass)	23.6"
Depth	18.5"
Side to center of flue collar	11.25"
Height to center rear flue collar	38"
Back to center top flue collar	6.25"

Nova C has a 25,174 BTU per hour (7 kW) EPA certified heat release rate, with actual heat release rates ranging from 9,000 to 50,000 BTU per hour (2.5 to 15 kW) depending on user loading and reloading.

Emissions and Efficiency

U.S. Environmental Protection Agency certified to comply with 2020 particulate emission standards for single burn rate heaters. This single burn rate wood heater is not approved for use with a flue damper. This heater meets the 2020 U.S. EPA's crib wood emission limits for wood heaters. Tested to EPA ASTM E2780-10, ASTM 2515-11, and CSA B415.1-10. This heater has been shown to deliver an average Emissions rate of 1.9grams/hour and 71% HHV Efficiency

Safety Listings

Nova C is available for sale in the United States and Canada has been listed with OMNI-Test Laboratories and is tested and compliant in accordance with UL 1482 – 2011(R2015), ULC-S627-00 (R2016), and ULC S628-93 (R2016)

Label

Nova C comes with a metal certification label on a chain affixed to the bottom back of the stove. This label is in English and French. For safekeeping, the label may be affixed to the air duct of the stove during installation.

Stove Installation

Safety Notice: Please read this entire manual before you install and use your new room heater. Failure to follow instructions may result in property damage, bodily injury, or even death. Contact local building or fire officials about restrictions and installation inspection requirements in your area. Do not install Nova C in a mobile home!

Planning the Installation

Proper care and attention to service helps to protect you from unnecessary fires and carbon monoxide poisonings. To get the best service and wood stove installation for your Nova C wood stove, we recommend Installers or Chimney Sweeps certified by the National Fireplace Institute (NFI) or the Chimney Safety Institute of America (CSIA).

To locate one of the more than 2,000 active NFI or CSIA Certified installers across North America, please use the installer locator on our website: <https://mffire.com/installers/>

Check with your local building officials and your home insurance company before installation. When this room heater is improperly installed, a house fire may result. To reduce the risk of fire, follow the installation instructions. Contact local building or fire officials about restrictions and installation inspection requirements in your area. If there are any major dents or other damage to your stove, please report to MF Fire prior to installation.

Stove Placement Requirements

Nova C must be placed in a room with a source of fresh air. The minimum room height that the stove can be installed in is 8 feet.

Nova C must be placed so that no combustibles are within or can swing within 36" (914mm) of the front of the stove (drapes, doors, etc.).

Caution: Avoid makeshift compromises during stove placement or installation. Failure to follow instructions may result in property damage, bodily injury, or even death.

Minimum Clearance and Floor Protection Requirements

Nova C may be installed as a top vent with a ceiling exit in either a standard or corner configuration, or as a rear vent with a direct rear exit. The minimum clearance requirements are listed in the table below. Clearances may be reduced following methods in NFPA 211, listed wall shields, pipe shields, or other means approved by local building or fire officials.

Nova C must be installed on a non-combustible surface or with adequate floor protection. Floor protection must extend around the front, sides, and rear of the stove, according to listed clearance requirements below.

Floor protection must be listed to UL 1618. Floor protection must be made of a non-combustible material and at least 0.018" (0.45 mm) thick. For a Nova C equipped with 6" legs and ash lip, Nova C equipped with 9" legs, and for all Nova C Tower configurations, only Type 1 ember protection is required. For Nova C equipped with 3" legs, Type 2 thermal protection with minimum R-value of 1.35 is required.

Chimney Connector Requirements

A chimney connector is required from the flue collar of the stove to the factory-built chimney or a masonry chimney. The chimney connector must be 6" (152 mm) diameter and at minimum 24 gauge black steel. Aluminum or galvanized steel is not allowed – these materials cannot withstand the flue temperatures and may give off toxic fumes when heated.

The chimney connector may not pass through a ceiling, attic, roof, closet, or similar other concealed space, or a floor or ceiling. Per, ULC, where passage through a wall, or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365, Installation Code for Solid-Fuel- Burning Appliances and Equipment

Use listed UL 103 HT chimney – see “Chimney Requirements for details. **DO NOT USE CONNECTOR PIPE AS CHIMNEY.**

The chimney connector should be as short and direct as possible. No more than 180° of elbows (two 90° elbows or two 45° and one 90° elbow, etc.) may be used for the entire chimney system. Horizontal runs should slope upwards at least 1/4" (6 mm) per foot and be a maximum 36" (914 mm) long.

NOTE: Additional elbows may be allowed if draft is sufficient. Whenever elbows are used the draft is adversely affected. Additional chimney height may be required to boost draft.

The chimney connector must be installed with the crimped end pointing downwards. This prevents creosote or condensation from leaking to the exterior of the pipe.

The chimney connector must be fastened to the stove and each adjoining section and kept clean.

Chimney Requirements

The minimum chimney height, as measured from the stove top, is 15 feet. Do not connect Nova C to a chimney flue serving any other appliance or use in conjunction with any air distribution ductwork, unless specifically approved.

This room heater must be connected to:

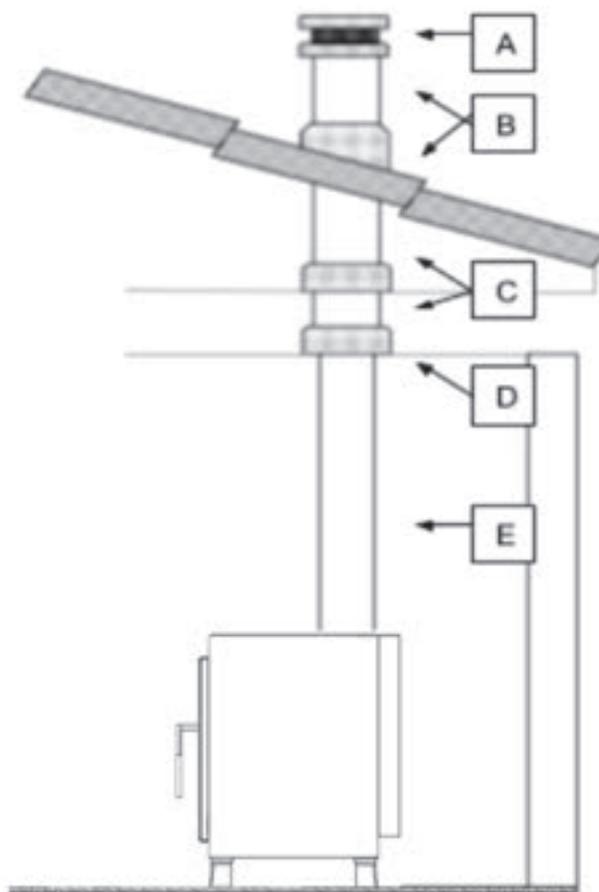

1. A 6" (150 mm) diameter, UL 103 HT chimney, from a single manufacturer

OR

2. A code approved masonry chimney with a flue liner.

Standard Chimney Arrangement

- A. Chimney termination
 - a. Minimum height: 15' (4.5m)
 - b. Maximum height: 33' (10 m)
- B. Roof penetration
- C. Chimney sections
- D. Ceiling penetration
- E. Chimney connector

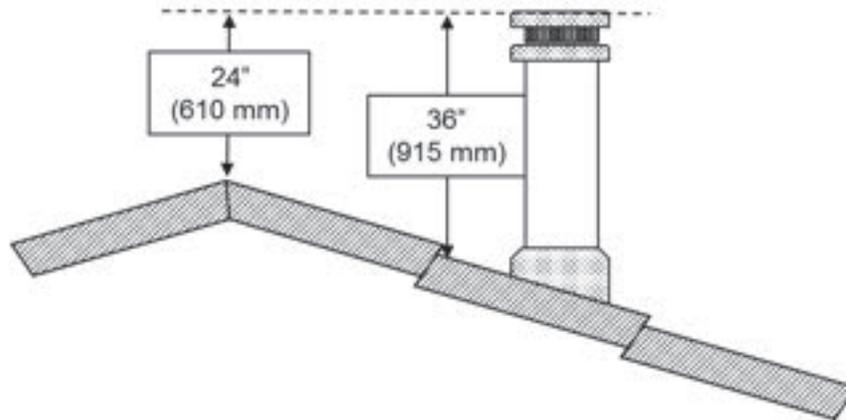

Chimney Termination Requirements

The chimney must have an approved cap (to prevent water from entering).

The chimney must not be located where it could become plugged by snow or other material.

The chimney must terminate at least 3' (914 mm) above the roof and at least 2' (610 mm) above any portion of the roof within 10' (3 m).

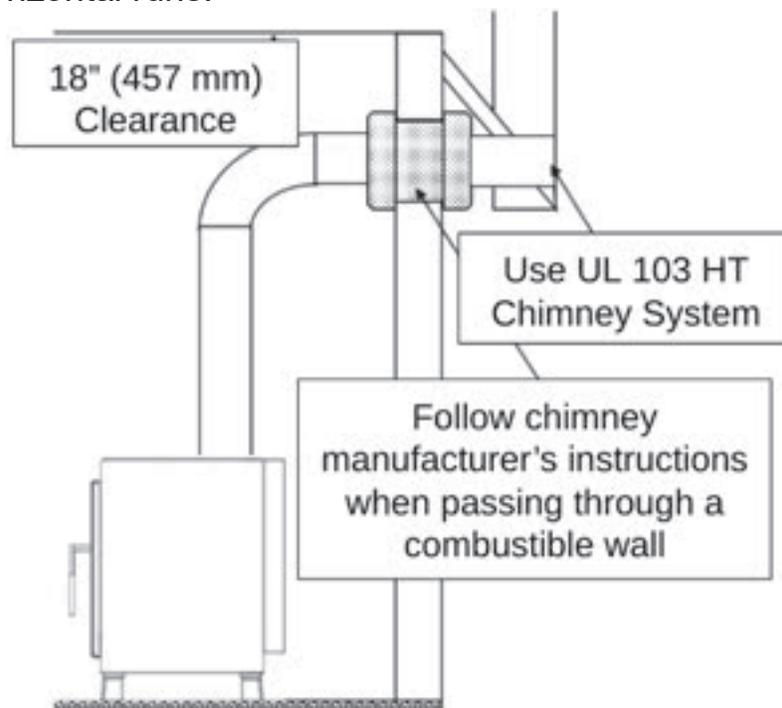

Exterior Factory-Built Chimney: Special Installation

Nova C may be used in conjunction with an exterior factory-built chimney provided that the chimney meets UL 103 HT requirements.

Special care must be taken regarding the wall thimble, or penetration from the chimney connector pipe to the exterior chimney, if the wall thimble must pass through an exterior wall. Here all chimney manufacturer's instructions must be followed, including guidance on spacing to combustible surfaces, piping requirements, and liner requirements. Check with local authorities before installation to ensure all requirements are met.

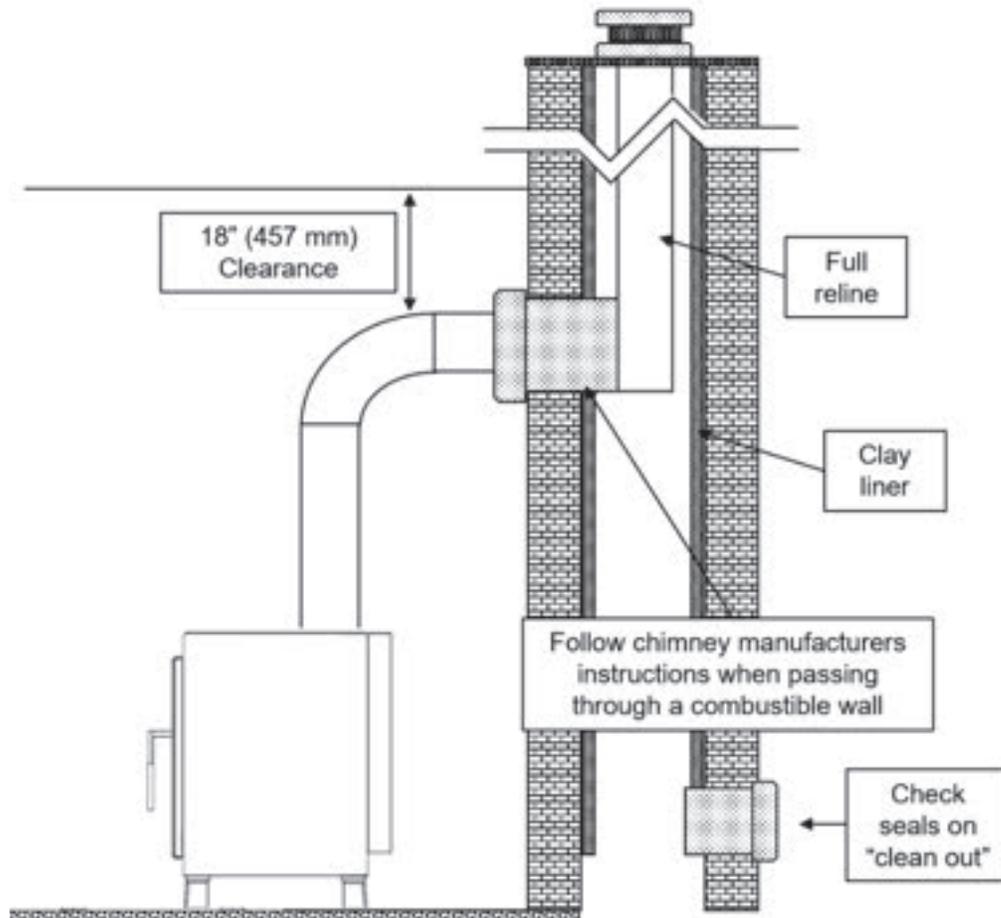

Floor protection is required 2" on both sides of the chimney connector for any horizontal runs.

Masonry Chimney: Special Installation

Nova C may be used in conjunction with a masonry chimney provided all installation instructions are followed.

We strongly recommend a full reline when installing the Nova C in a masonry chimney. If the chimney does not have a clay tile liner, a full reline is required. The chimney must be clean, undamaged, and meet all local building codes.

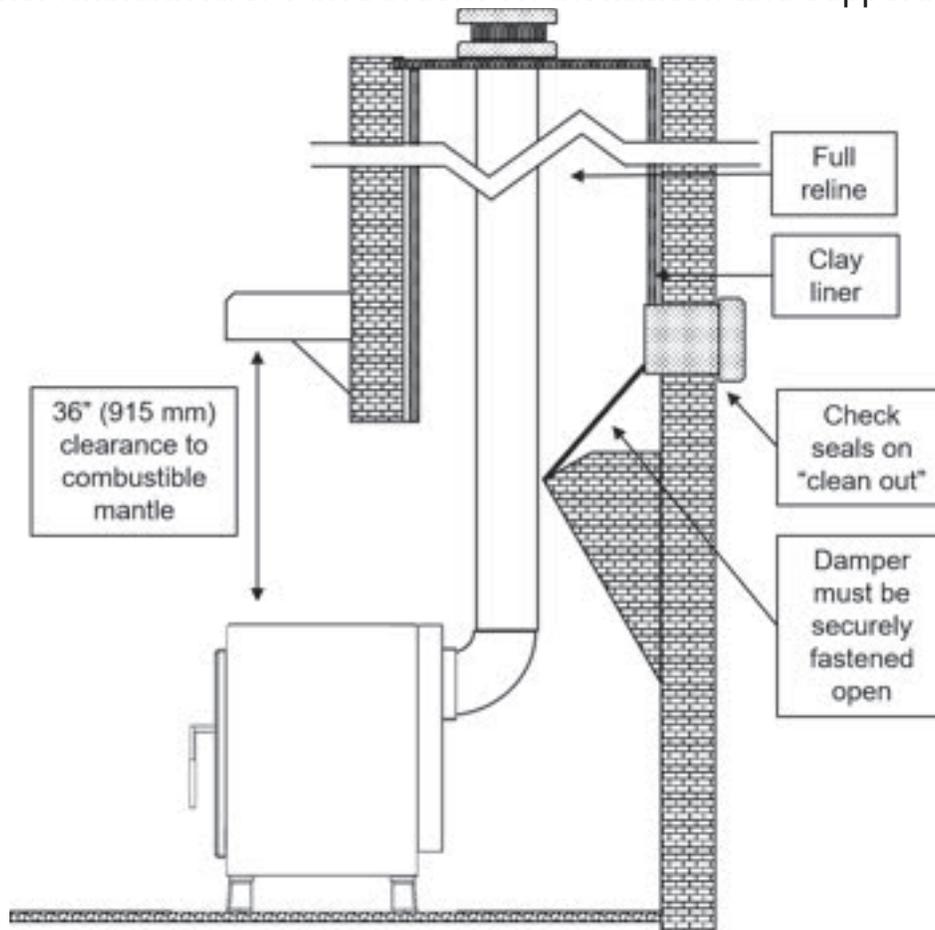

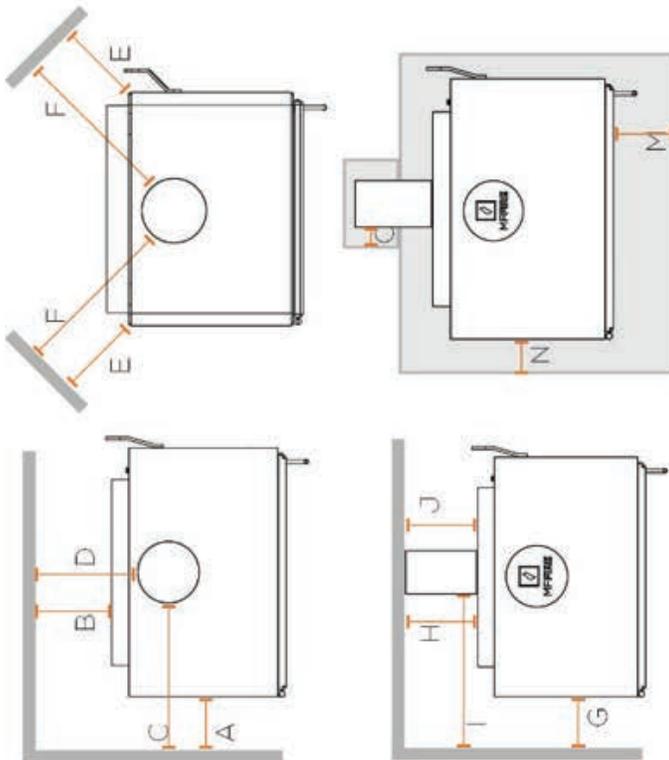

Special care must be taken regarding the wall thimble, or penetration from the chimney connector pipe to the masonry chimney, if the wall thimble must pass through a combustible exterior wall. Here all chimney manufacturer's instructions must be followed, including guidance on spacing to combustible surfaces, piping requirements, and liner requirements. Check with local authorities before installation to ensure all requirements are met.

Hearth Mount in Masonry Fireplace: Special Installation

Nova C may be used in conjunction with a masonry fireplace provided all installation instructions are followed.

The entire fireplace must be clean, undamaged, and meet all local building codes. This installation requires a full reline. The liner must be a stainless steel chimney connector or flexible vent pipe. Follow the liner manufacturer's instructions for installation and support.

MINIMUM CLEARANCE REQUIREMENTS

		Single Wall Connector Pipe	Double Wall Connector Pipe	Double Wall Connector Pipe with Reduced Clearance Kit
A	Sidewall to unit	20" (508 mm)	18" (458 mm)	20" (508 mm)
B	Backwall to unit	17" (432 mm)	11" (280 mm)	7.5" (190 mm)
C	Sidewall to connector	28" (711 mm)	26" (661 mm)	28" (711 mm)

M	Front	16" US/18" CAN		
N	Side	8" (203 mm)		

FLOOR PROTECTION REQUIREMENTS

Leg Height	With Ash Lip	Without Ash Lip
3"	R = 1.35	R = 1.35
6"	Type 1	R = 1.35
9"	Type 1	Type 1
Tower	Type 1	Type 1
Bench	Type 1	Type 1

Installing Legs and Ash Lip (Optional)

Nova C will arrive bolted to a pallet with legs and leg bolts packed separately. The leg securement bolts are located inside the firebox and labeled “Leg Pad Bolts”. If ordered with the optional ash lip, the ash lip will contain two spacer plates for the rear legs, four longer bolts, and two filler pieces for the ash lip when used in the 6” position. To install the legs follow the steps below. If you ordered a Nova C Tower, you can skip these steps.

Step 1: Unbolt Nova C from the pallet and gently rock back onto a soft surface such as a rug or a blanket. If installing the ash lip follow step 2, if not go directly to step 3.

Step 2: Press the ash lip up against the bottom of the stove such that two appropriate holes (front for 4” ash lip, rear for 6” ash lip) are over the leg pad holes. Note: In Step 3, installation will require the included longer leg bolts for installing the ash lip.

Place spacer plates between over the leg pads on the rear legs of the stove.

Step 3: Position a front stove leg so that the hole in the leg aligns with the hole in the leg pad. Insert the bolt and washer through the leg, into the leg pad hole. Rotate the leg so the solid sides are parallel to the outside edges of the stove. Use a wrench tighten the bolt. Repeat for all four legs.

Configuring the Optional Rear Vent

Nova C can be configured as either a top venting or a rear venting stove. Nova C will arrive in the top vent configuration. To switch to the rear vent configuration, the following procedure may be followed.

Step 1: Remove the rear blocker plate collar, secured with 4 bolts and 1 washer each, and access panel, secured with 6 bolts and no washers, from the back of the stove as shown below.

Step 2: Next, reach inside the back of the stove and remove the spacer plate and the flue collar, secured with 4 bolts and 2 washers each, located on the inside top of the stove.

Step 3: The blocker plate that was removed from the rear of the stove can then be inserted over the opening at the top of the stove, the spacer plate placed below, and the entire assembly secured to the top of the stove with bolts as shown below. Before tightening bolts, be sure that no gaps exist between the blocker plate and the top of the stove whereby smoke may escape. If necessary, gasket cement can be placed between the plate and the top of the stove.

Step 4: Replace the access plate and install the flue collar, as shown below.

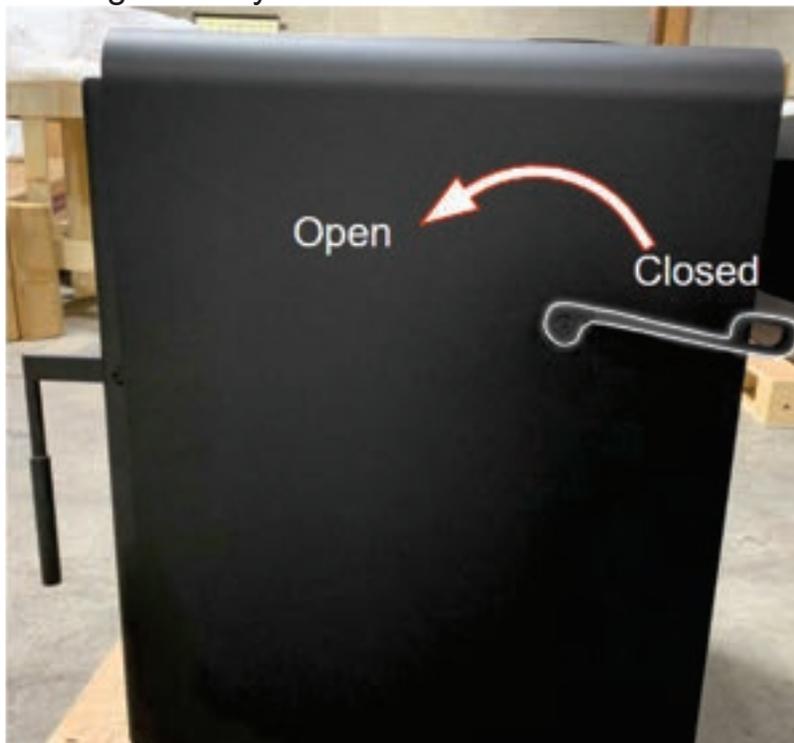

Installing the Bypass Handle

Nova C comes with the bypass handle detached for safety during transport.

Step 1: Remove the set screw from the bypass handle.

Step 2: To install the bypass handle simply slide the handle over the bypass rod on the back of the right side of the stove such that the handle is pointed towards the rear of the stove, with the bent portion of the handle angled away from the stove as shown below.

Step 3: Rotate the bypass handle on the bypass rod until the set screw holes are aligned with the holes in the bypass handle, insert the set screw in the rear-most hole, and tighten into the hole. Tighten the set screw, wiggle the handle, tighten the set screw, wiggle the handle, etc. until the handle is tight and there is no wiggle.

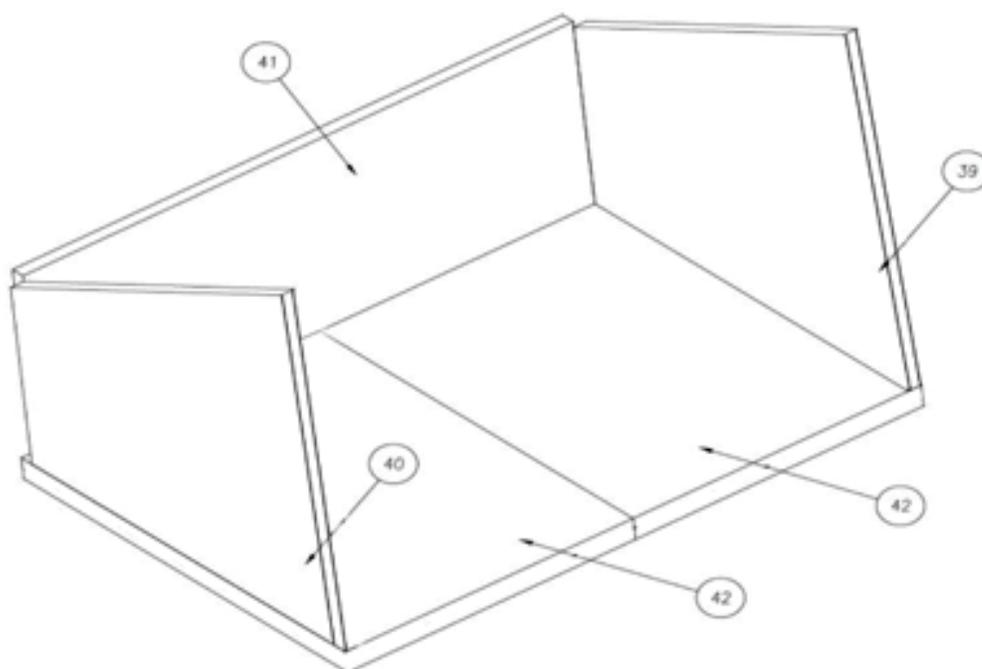

Insulation and Fire Brick

Nova C comes equipped with a two-part insulation strategy to maintain clean, efficient fires and a long lasting coal bed. The insulation blanket maintains efficient and long-lasting heat while the fire bricks provide a durable platform for your fire and maintain smooth even heating.

The insulation is pre-installed in the firebox, while the fire bricks must be installed before the first fire and should be installed following the procedure below. Gloves and safety glasses should be worn during installation.

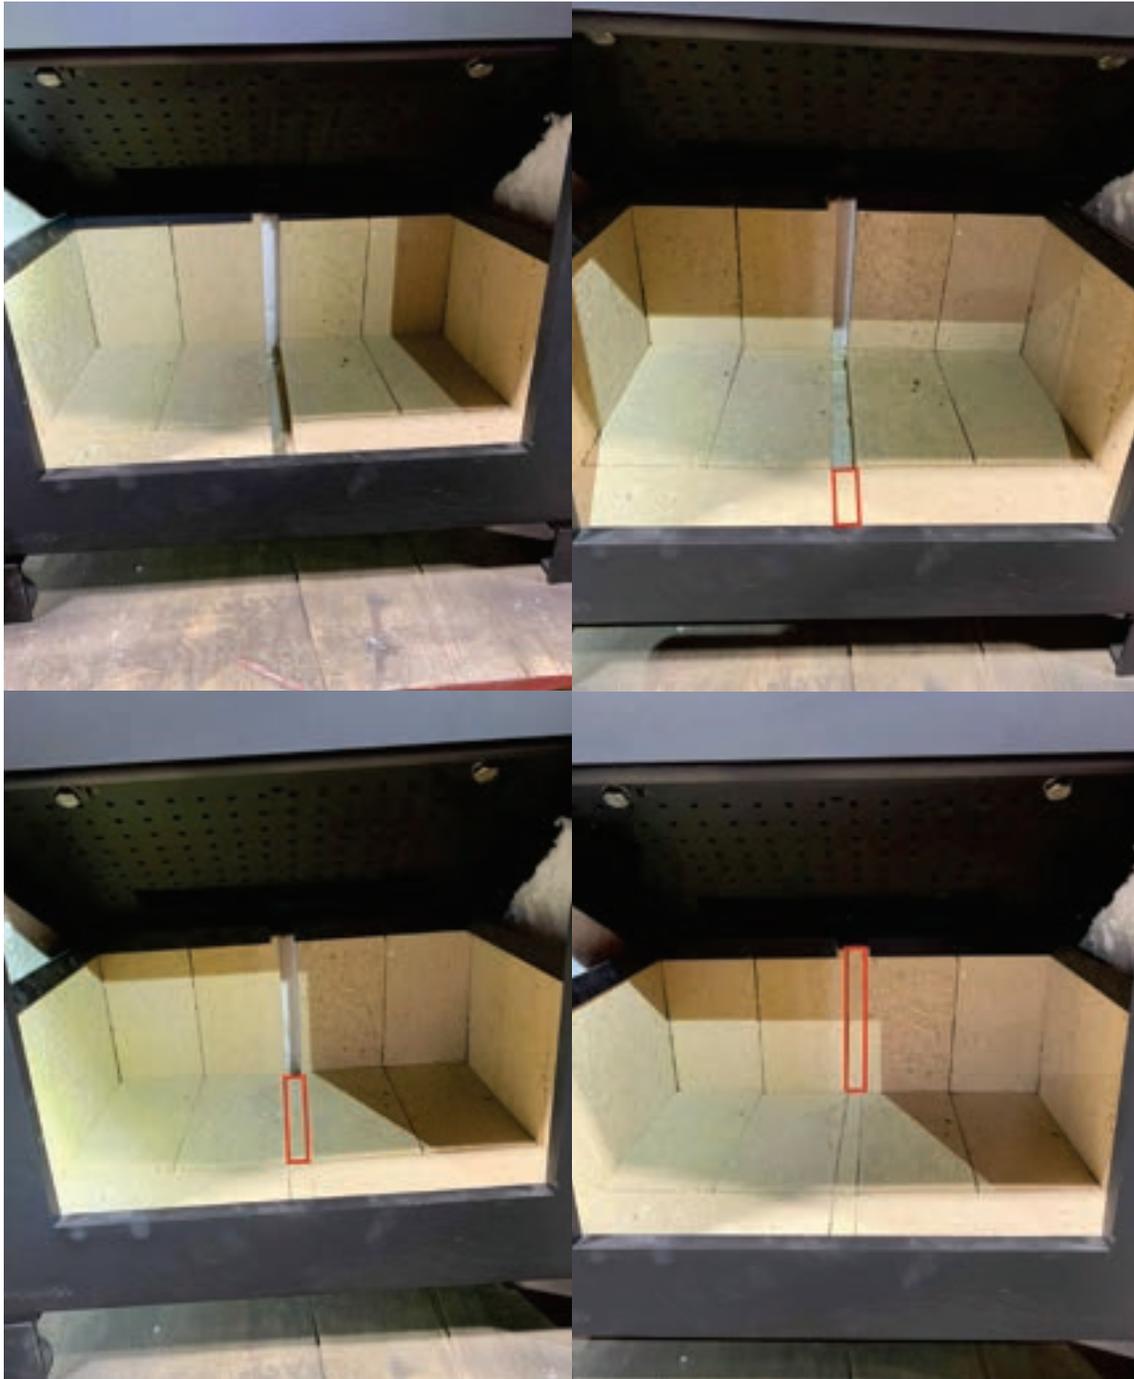

Step 1: Unpack the fire bricks that accompany your Nova C, and ensure all pieces are present. The fire bricks received with your stove may not have the corresponding numbers in the steps below.

Step 2: The insulation blanket will be pre-installed as shown below.

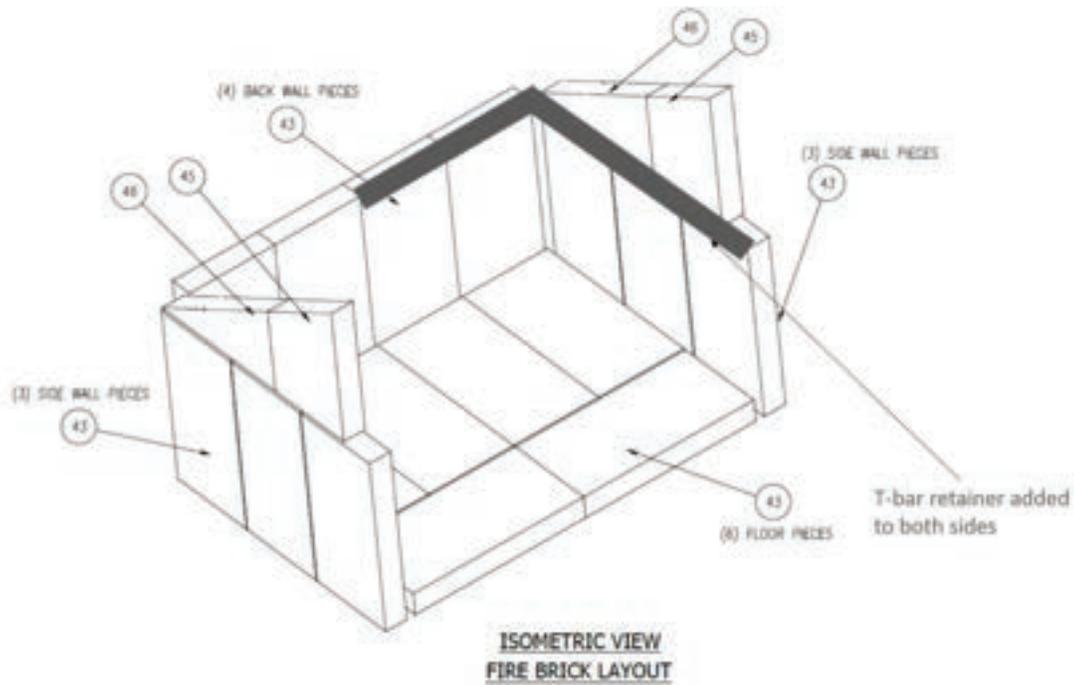

Step 3: Next, install the fire bricks. The first fire bricks to install are the four rear wall bricks and then the three bricks on the left and right sidewall. A small gap may exist in between the corner of the fire bricks as shown in the line drawing below. Next, install the six fire bricks on the floor of Nova C. Push all fire bricks up against the side and back walls. You may have a gap in the middle of the firebox as

shown below. These can be filled with the brick slivers contained within your fire brick boxes.

Lastly, the partial bricks that make up the second row of bricks on the side of the stove should be installed. To hold this row of bricks in place, the two T-bar retainers need to be inserted on top of the vertical row of fire bricks on both sides of the stove.

Occasionally due to small variations in components and materials, it is normal for the bricks and fiberboard to have differing degrees of fit in any stove, but the specific fit and tolerance will not change or impact your stove performance. This includes slight gaps or a tight fit. In the event some bricks are tight, some adjustment or manual force may be needed to install these pieces. Slight gaps will be filled with ash from your first few fires.

Catalytic Combustor

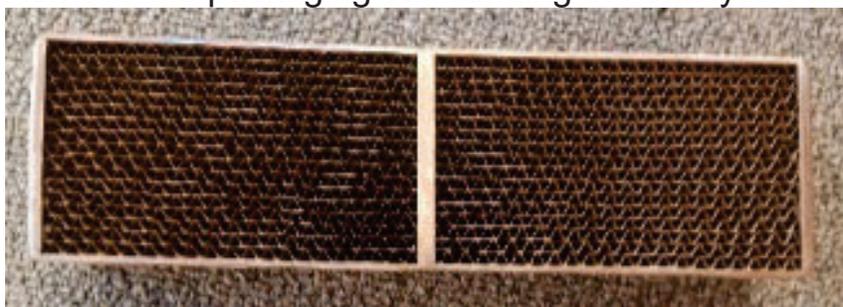

The Nova C catalytic combustor (Part # N11) is a long rectangular piece with a honeycomb-like structure.

It can easily be installed as a final step prior to using your stove. Nova C may not be operated without the catalytic combustor properly installed. To prevent improper operation, Nova C has a special catalytic combustor swing door that stops airflow if the catalytic combustor is improperly installed.

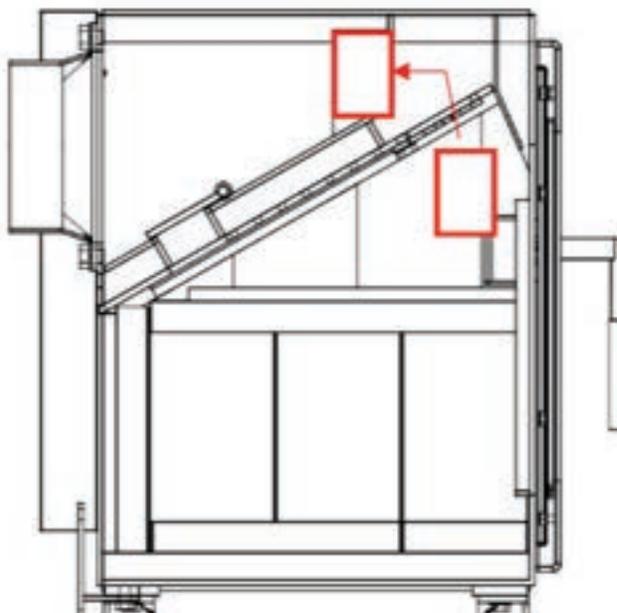

To install the catalytic combustor and flame shield follow the steps below and watch the video using this QR code:

Step 1: Remove the packaging surrounding the catalytic combustor.

Step 2: Slide the catalytic combustor through the rectangular opening. The mesh sides should be facing the front and rear of the stove as shown in the diagram below.

Step 3: Slide the catalytic combustor into the holding box, pushing back the combustor door, and sliding the combustor back as far as it can go in the holding box. The combustor may be a snug fit, which is normal.

Step 4: Insert the 'U' shaped retaining peg in the front of the catalytic combustor. The combustor retaining peg may be in the top of the stove in front of the combustor.

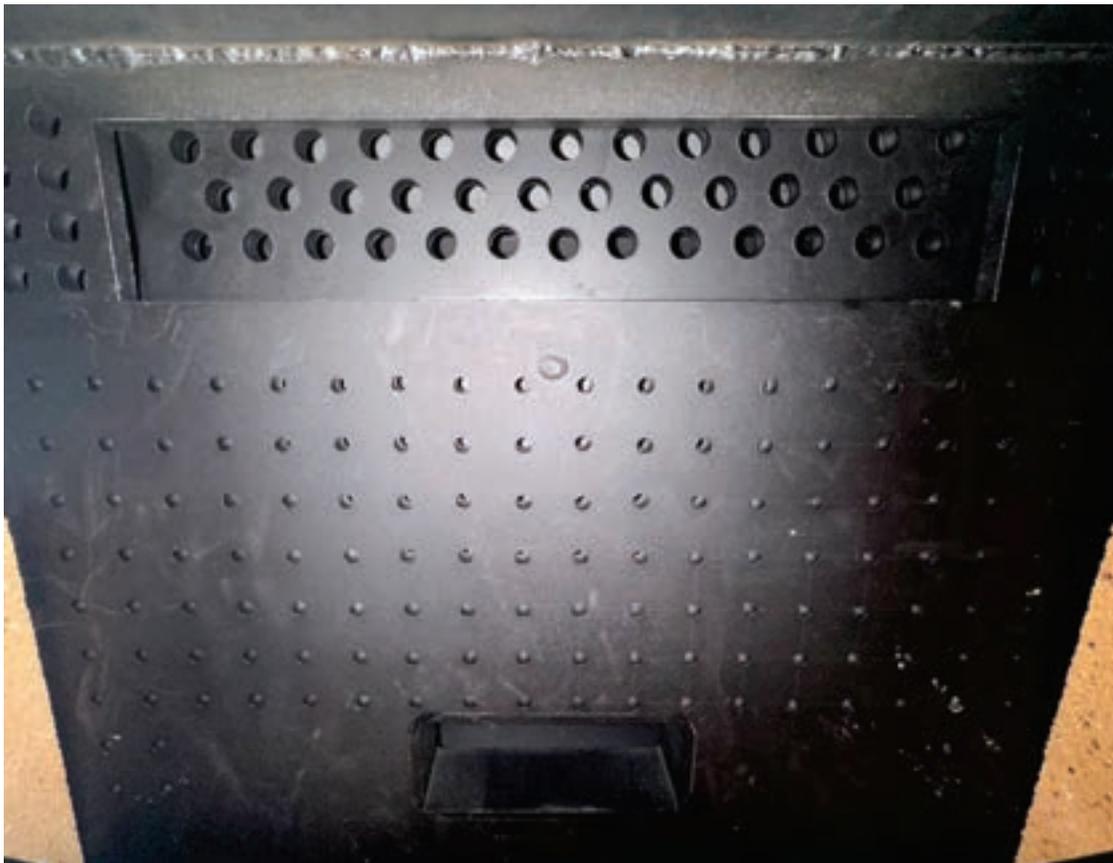

Caution: Without this retaining peg the catalytic combustor may fall forward, preventing the stove from operating as intended.

Step 6: Install the flame shield.

To install the flame shield (shown below), take the flame shield and angle it up into baffle opening where the combustor passed through. Next, lay the flame shield flat with the two tabs pointed towards the rear of the stove.

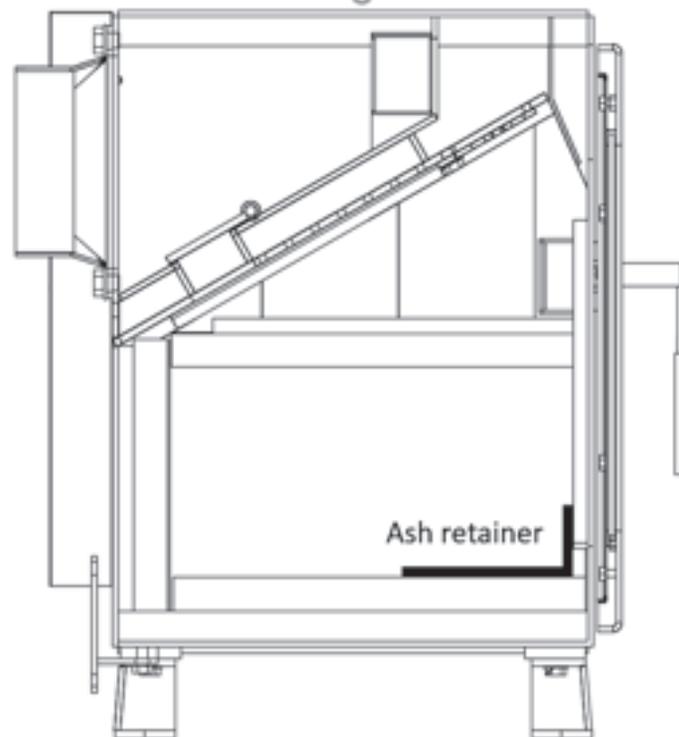

Flame shield

Flame shield final position

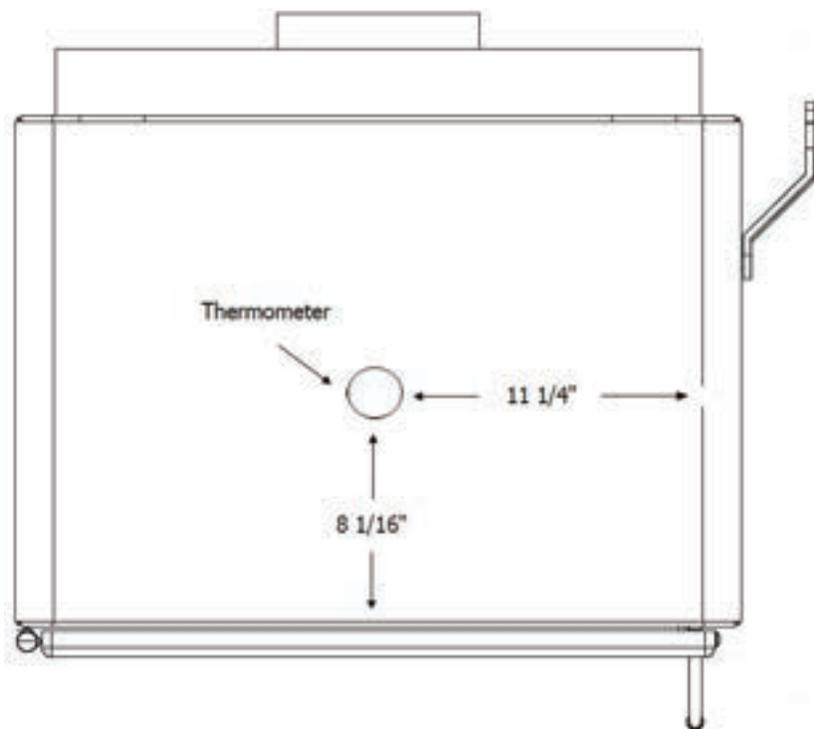

Ash Retainer

Your Nova C comes standard with a removable ash retainer to extend the number of burns between emptying the ash. The 6" leg L-shaped ash retainer is placed directly on the brick on the firebox floor, and flush with the front inside of the stove, as shown below.

Stove Top Thermometer

The stove top thermometer is an accessory that can be used to help determine when to close the catalytic combustor bypass on your Nova C. The thermometer should be placed on the stove top, 8" from the front of the stove and 11.25" from the side of the stove. For most uses, when the thermometer reads "ENGAGE CATALYST", the catalytic combustor bypass can be swung closed (to the rear of the stove).

Initial Curing

During the first burn of your wood stove, the paint on the stove may off-gas as part of its final curing process. This is to be expected. Open windows and ventilation means are recommended. Please refer to the Exterior Paint section for additional details.

Operation

Nova C is built to be simple and easy to use. It just works. We designed Nova C with no dampers to play with. Just build a fire, sit back and enjoy. Below are written operation instructions. We also highly recommend watching our series of videos on how to best operate your stove using this QR code:

Bypass

Nova C is equipped with a bypass lever for the catalytic combustor. The bypass handle is located on the right side of the stove and should be operated with the included fall-away handle. When not used, the fall-away handle can be stored on the rear of the unit.

The bypass should always be used in conjunction with the front-loading door. Prior to opening the stove door, the bypass should be rotated forward to the open position. The door may then be opened. To minimize smoke spillage when reloading, open the door slowly, cracking it for several seconds before fully opening. After reloading your stove the door may be closed and then the bypass rotated to the closed position. By operating the two in conjunction with one another you may minimize smoke spillage and maximize the efficiency of your stove.

Starting a Fire

We strongly recommend a top-down fire for burning in Nova C. In the top-down fire method, larger pieces of wood are first placed on the floor of the wood stove fire box, with smaller pieces of wood, kindling, and newspaper on top. Take a match or lighter to the newspaper, and the fire will burn slowly into the kindling and to the larger logs underneath. It may take a few tries to build a fire with the top-down fire in order to get it just right, but the result is a cleaner, easier, and by far the best way to build a fire in a wood stove.

Step 1: Establish draft

If starting from a cold start it is important to establish draft in your chimney before filling the stove with wood. Chimney's draft when they are hotter than the air outside the chimney. Particularly on warm mornings in the spring or the fall, the chimney can be colder than the outside air. In this situation, air will flow down your chimney, through your stove, and into the room.

To remedy this, simply open the bypass and ignite a few pieces of newspaper up near the bypass opening until the flames are noticeably drawn (or sucked in) towards the bypass opening in the rear of the stove.

Step 2: Build the base

Set larger logs on the floor of your wood stove firebox.

In beginning to build a fire, it is necessary to begin with a solid foundation of wood. The pieces should be at least 3 – 5 inches in diameter.

Step 3: Build the fire ladder

Set a 2nd layer of medium logs atop the larger logs in a crisscross fashion. It is best to choose medium logs which are approximately 50%-75% of the size of the larger logs. Then, place a third layer of small logs atop the medium logs in a crisscross fashion. The small wood pieces should be approximately 1-2 inches in diameter.

The fire initial fire you build will catch the smallest logs and these in turn will catch the medium logs which will in turn catch the largest logs.

Step 4: Place the kindling

Set fine kindling on top of small logs. Typically, we place wood splits, heavy duty cardboard, or both.

Step 5: Prepare the ignition material

We like using knots of newspaper as our ignition material. To make a newspaper knot, tear a sheet of newspaper, twist it together to create a rope-like piece, and tie into a knot. Place three or four knots above the kindling evenly throughout the width of the fire box.

Step 6. Light the fire

Be sure the bypass is still open (see Bypass section) and then ignite the newspaper. Leave the door open just a crack, being sure to monitor the fire at all times when the door is open. Ignite the newspaper knots. This can be done quickly with a long match or stick lighter.

Controlling the Burn

Your Nova C has only one burn mode – perfect. If you would like more or less heat out of your Nova C, simply load more or less wood into your stove.

Reloading

The best time to reload your wood stove is when there are hot coals remaining and there is none or limited active flaming. When reloading, if there is a large coal bed (glowing red coals, covering the entire bottom, at least an inch deep), there is no need to use kindling or newspaper. To reload, open the bypass and then slowly open the front door. Fill the firebox chamber with logs, taking care not to stack the logs too close or touching the front door glass. Then simply shut the door and walk away. Close the bypass when the provided thermometer reads “ENGAGE CATALYST”.

Wood Selection

Use ONLY untreated wood in your Nova C. The use of any other fuel may result in unsafe burning conditions that could cause damage to. When choosing wood, you should use non-resinous, seasoned hardwoods if possible. Examples of appropriate hardwoods are oak, ash, and maple. Seasoned wood is wood with between 15-20% moisture content. To test the moisture content, split a piece of wood and use your wood moisture meter on the interior center of the wood. Store this wood in a dry place and remote from your Nova C.

Why does dry wood matter? It burns much more efficiently, increasing heat output from the stove and reducing creosote buildup in the chimney. Refer to our website blog posts for additional information regarding non-resinous, seasoned hardwoods.

Ordinary Operating Sounds

During the typical operation of your Nova C, the wood stove will make occasional creaking noises. This is completely normal and is likely caused by the heating and cooling of the stove.

Regular Maintenance and Troubleshooting

Wood stoves, even those as clean as Nova C, must be cleaned frequently because soot, ash, and creosote may accumulate.

Establish a routine for the fuel, wood burner and firing technique. Check daily for creosote build-up until experience shows how often you need to clean to be safe. Be aware that the hotter the fire the less creosote is deposited, and weekly cleaning may be necessary in mild weather even though monthly cleaning may be enough in the coldest months. Contact your local municipal or provincial fire authority for information on how to handle a chimney fire. Have a clearly understood plan to handle a chimney fire.

Glass

Caution: Do not clean the glass while hot. Glass could shatter causing burns and permanent damage.

The glass will accumulate some soot through the course of regular burning. More soot will accumulate during slow burns than during hotter burns. Sooting is worse with unseasoned or resinous woods. To clean the glass, the unit should be allowed to cool. Use a soft cloth and a non-ammonia, non-abrasive cleaner. There are many options for wood stove glass cleaner, including on the MF Fire website.

Sooting may also be a result of a loose door or glass seal. If there is smoke leakage around the edges of the glass, the glass seal may be improved by tightening the various bolts and nuts securing the glass to the door. Tighten with hand tools only. Machine tightening may result in glass breakage. Do not over tighten.

Disposal of Ashes

Ashes should be placed in a steel container with a tight-fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

Door Gaskets

Inspect all gaskets and door seals before each use. Nova C should be operated with the front door tightly shut.

Catalytic Combustor

This wood heater contains a catalytic combustor to help achieve a clean burn. It is important to periodically monitor the operation of the catalytic combustor to ensure it is properly functioning, and not clogged. A clogged or otherwise non-functioning combustor will result in poor performance, smoke leakage, a loss of heating efficiency, and an increase in creosote and emissions.

Your catalytic combustor should be visually inspected at least monthly to check its condition. Do not attempt to inspect the catalytic combustor unless the stove is cool and not currently in use. To inspect the catalytic combustor simply open the door of your wood heater and remove the bolts holding the flame shield in place. If there is some ash on the catalytic combustor, use a soft bristled brush or vacuum to clean off the ash.

A properly functioning catalytic combustor maintains temperatures in excess of 600 °F. Following cleaning, if the catalytic combustor does not function, it may need to be replaced. For replacement instructions refer to the Catalytic Combustor Troubleshooting and Replacement section of this owner's manual.

Monthly Maintenance

Creosote – Formation and Need for Removal

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote makes an extremely hot fire.

The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

The use of unseasoned (wet, green) and/or resinous wood will increase the formation of creosote.

If you are not confident in performing a creosote inspection, contact a local chimney sweep to perform an inspection. Excess creosote buildup may cause a chimney fire that may result in property damage, injury, or death.

Gasket

There is a gasketing located on the front door, and on the front door glass. The gasket in these areas should be visually inspected for any signs of deterioration or smoke leakage into the room. If the gasket is deteriorating, contact MF Fire for a replacement gasket.

Annual Maintenance

Exterior Paint

To fix areas on the exterior of the stove that have been scratched or scraped, simply use aerosol stove paint. The paint needed for color match touch-up is Stove Bright Satin Black (1990).

Paint should only ever be applied while the stove is cool. Allow the paint at least one hour to cool. After applying the paint, the newly painted area may appear darker than original until it is cured. When using the stove next, the curing process may give off some fumes.

Glass

In the event of broken door glass, a new pane of glass must be installed before usage may continue. **Do not operate with broken glass!**

To prevent broken glass, avoid striking the glass, slamming the door shut, or building the fire too close to the glass.

To replace broken glass, carefully open the front door while the stove is cool. Remove large shards with gloves and dispose of appropriately. Then carefully unscrew the interior door frame, taking care to keep all screws.

Replace the glass with official MF Fire replacement glass. Do not use unauthorized substitute materials. Contact your place of purchase if replacement glass is needed.

When replacing glass, ensure the glass is properly surrounded by graphene impregnated wood stove gasket, and centered over the window opening.

Catalytic Combustor Replacement

If you suspect that your catalytic combustor is not working, the catalytic combustor should be removed and inspected to identify the source of the problem.

CAUTION: DO NOT OPERATE THE NOVA C WOOD HEATER WITH CATALYTIC COMBUSTOR REMOVED!

To access the catalytic combustor follow the instructions in the catalytic combustor installation section of this manual.

If any cracking or peeling is observed, the catalytic combustor must be immediately replaced. Please contact your place of purchase for a replacement catalytic combustor.

Safety Notice: Burn untreated wood only. Burning materials such as treated wood, metal foil, coal, plastic, garbage, sulphur, or oil may damage the catalytic combustor. Excessive smoking indicates the combustor has failed and requires replacement.

Appendix A: Nova C Tower Assembly

Nova C Tower ships with the Nova C stove, a Nova C Tower Pedestal, and optionally 6" pedestal legs.

To assemble the Nova C Tower, follow all instructions and guidelines above and the additional guidance below. Please note, Nova C must be attached to the Nova C Tower Pedestal before the installation of ceramic fiberboard and firebricks.

Attaching the Nova C Tower Pedestal

CAUTION: Nova C and Nova C Tower are heavy. To avoid injury, at least two people should be used to perform all assembly steps involving heavy lifting.

Step 1: If installing the optional Nova C Tower 6" legs, carefully rotate the Nova C Tower Pedestal on to its side on a soft surface, such as a blanket or carpet as shown below.

Skip to Step 3 if you did not order optional 6" pedestal legs.

Step 2: Using the bolts and washers provided, tightly fasten the 6” legs to the bottom of the pedestal using a socket or adjustable wrench. The hollow side of the legs should point towards the center of the stove, with the flush square surface attached to the stove, as in the image below.

Step 3: Carefully rotate Nova C Tower Pedestal into the upright position and place in its final position. Follow all requirements in the Stove Placement Requirements section. Your Nova C Tower must be level and sturdy prior to continuing to Step 4.

Step 4: Carefully place Nova C on top of the Nova C Tower Pedestal ensuring the leg pad holes are aligned with the holes on top of the pedestal. The front of the Nova C should face the same direction as the wood storage opening of the pedestal.

Step 5: Using a socket or adjustable wrench, secure the Nova C stove to the Nova C Tower Pedestal from the underside using the four bolts and four washers provided. At this point, Nova C should be very secure to the Nova C Tower Pedestal.

Step 6: Using gloves, place the piece of ceramic fiberboard insulation and sheet metal shield into the top of the pedestal. These next steps will require both hands and the proper order of operations to complete properly. NOTE: some models use two ½” pieces of insulation and other use a single piece of 1” insulation

Step 7: While facing the pedestal, first place the metal shield and insulation directly on top of the fixed clips on the left-hand side. Next, the metal shield and insulation should be elevated above the clip holders on the right-hand side. Then, using your other hand, slide the two clips into place as shown in the pictures below. The metal shield can then be set down on top of the clips

Step 8: To insert the removable ash tray, simply slide between the bottom of the stove and the top of the pedestal, as shown below.

To remove the tray, insert the included ash tray handle as shown below, and slide partially out. The same handle can be used to push the tray back into place. When not in use, the ash tray handle may be stored inside the pedestal base.

Appendix B: Lifetime Limited Warranty

To register your stove, go to mffire.com/myproduct. Please provide pictures of your beautiful new installation. Specific exclusions to this warranty are paint, gasket, glass, fasteners, and fire bricks. This warranty is subject to sections A and B. Mileage/labor charges, unless specified below, are not covered by warranty. Labor charges are subject to defined maximum limits by MF Fire. Additional service charges above the defined maximum limits may be charged by the service technician.

<u>Component</u>	<u>Coverage Period</u>			<u>Labor Coverage Period</u>
	Limited Lifetime	5 years	2 years	Years
Firebox, door frame (welds only)	✓			5
Tower or Bench assembly	✓			
Insert Surround Kit assembly	✓			
Bypass plate assembly		✓		2
Bypass handle		✓		2
Catalytic combustor (N11)	✓			
Combustor swing door assembly			✓	1
Air duct(s)			✓	2
Ash lip			✓	2
Ash pan			✓	1
Front door handle assembly			✓	1
Wooden door handle			✓	1
Room blower fan and associated components			✓	1
AES insulation		✓		2
Fire brick retainers			✓	2
Ash retainer		✓		2
Cast iron legs		✓		2
All components not mentioned above are subject to a one-year warranty coverage period.				

A. If warranty service is needed

1. If you discover a problem that you believe is covered by this warranty, you must report it to the place of purchase WITHIN 30 DAYS, indicating model name and serial number.
2. MF Fire has the option of either repairing or replacing the defective component.
3. Any appliance or part thereof that is repaired or replaced during the limited warranty period will be warranted under the terms of the original limited warranty for a period not to exceed the remaining term of the original limited warranty.

B. Conditions and Exclusions

1. This device must be installed, operated, and maintained at all times in accordance with the instructions in the Owner's Manual. Any alteration, willful abuse, accident, neglect, or misuse of the product shall nullify this warranty.
2. This warranty only applies to the initial owner and residence as registered. A wood stove that has been resold or relocated is not covered under warranty.
3. Discoloration and minor expansion, contraction, or movement of certain parts and potential resulting noise, is normal and not a defect and, therefore, not covered under warranty.
4. This warranty does not cover misuse of the stove. Misuse includes over-firing or use of any fuel not recommended by the manual. Misuse of the wood stove can cause serious damage and will void the warranty.
5. Damage to the appliance while it is in transit is not covered by this warranty but is subject to a claim against the carrier.
6. The warranty, as outlined within this document, does not apply to the chimney components or other accessories used in conjunction with the installation or use of the stove.
7. MF Fire is not responsible for inadequate performance caused by environmental conditions.
8. Limited Lifetime is defined as up to seven years.
9. Exclusions to this lifetime limited warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration or adjustment of the manufacturer's settings of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, alteration, or act of God.
10. Damage to surfaces caused by fingerprints, scratches, melted items, or other external sources left on the surfaces from the use of abrasive cleaners is not covered in this warranty.
11. Damage to the surfaces from over-firing is not covered in this warranty.

12. MF Fire is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty.
13. This warranty does not cover any loss or damage incurred by the use or removal of any component or apparatus to or from the Nova.
14. Any statement or representation of products and their performance contained in MF Fire advertising, packaging literature, or printed material is not part of this limited lifetime warranty.
15. MF Fire will not cover the cost of the removal or re-installation of hearths, facing, mantels, venting or other components.
16. This lifetime warranty is the only warranty supplied by MF Fire, the manufacturer of the appliance. All other warranties, whether express or implied, are hereby expressly disclaimed and purchaser's recourse is expressly limited to the warranties set forth herein.

*ASTM E2515 requires that calibrations of barometers be performed on a semi-annual basis (mercury barometers are exempt), The calibration of the barometer used in the testing of the appliance described in this report was calibrated with an annual calibration due date. The testing described in this report occurred two days after what would have been the due date for a 6- month calibration cycle. The succeeding calibration performed by an ISO-accredited calibration laboratory reported that the device was received “Within Tolerance”. This calibration has been added to this report as supporting evidence that the device was accurate and in good working at the time of testing.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to the SI through an NMI such as but not limited to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NC SL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by ILAC G8:2019. Unless otherwise stated, a test uncertainty ratio (TUR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

THIS CERTIFICATE SHALL NOT BE REPRODUCED, EXCEPT IN FULL, WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC.

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI/Z540-1-1994 quality standards.

Member: National Conference of Standards Laboratories and Weights & Measures

Calibration complies with ISO/IEC
17025, ANSI/NCSL Z540-1, and 9001

This certificate indicates Traceability to standards provided by (NIST) National Institute of Standards and Technology and/or a National Standards Laboratory.

A Test Uncertainty Ratio of at least 4:1 is maintained unless otherwise stated and is calculated using the expanded measurement uncertainty. Uncertainty evaluation includes the instrument under test and is calculated in accordance with the ISO "Guide to the Expression of Uncertainty in Measurement": (GUM). The uncertainty represents an expanded uncertainty using a coverage factor k=2 to approximate a 95% confidence level. In tolerance conditions are based on test results falling within specified limits with no reduction by the uncertainty of the measurement. The results contained herein relate only to the item calibrated. This certificate shall not be reproduced except in full, without written approval of Control Company.

Note :

Maintaining Accuracy:

In our opinion once calibrated your Digital Barometer should maintain its accuracy. There is no exact way to determine how long calibration will be maintained. Digital Barometer change little, if any at all, but can be affected by aging, temperature, shock, and contamination.

Recalibration:

For factory calibration and re-certification traceable to National Institute of Standards and Technology contact Control Company.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to either the SI or to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by JCGM 106:2012. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

This report may not be reproduced, except in full, without written permission of InnoCal. The results stated in this report apply only to the items tested or calibrated. Measurements reported herein are traceable to SI units via national standards maintained by NIST and were performed in conformance with MIL-STD-45662A, ANSI/MCSL Z540-1-1994, 10CFR50, Appendix B, ISO 9002:94, and ISO 17025:2017. Conformance based on Simple Acceptance as a Decision Rule. The estimated measurement uncertainty (EMJ), if reported on this certificate, is being reported at a confidence level of 95% or K=2 (unless otherwise noted in the remarks section).

The gas calibration cylinder standard prepared by Praxair Distribution, Inc. is considered a certified standard. It is prepared by gravimetric, volumetric, or partial pressure techniques. The calibration standard provided is certified against Praxair Distribution, Inc. Reference Materials which are either prepared by weights traceable to the National Institute of Standards and Technology (NIST), Measurement Canada, or by using NIST Standard Reference Materials where available.

Note: All expressions for concentration (e.g., % or ppm) are for gas phase, by volume (e.g., ppmV), unless otherwise noted.

Certification Information:

Certification Date: 04/25/2023 Term: 96 Months Expiration Date: 04/25/2031
This cylinder was certified according to the 2012 EPA Traceability Protocol, Document EPA-820/R-2021, using Procedure G1. Uncertainty shown is expressed as absolute expanded uncertainty at a level of confidence of approximately 95% with a coverage factor k = 2. Do Not Use this Standard if Pressure is less than 100 PSIG.
CO responses have been corrected for CO interference. CO responses have been corrected for CO2 interference.

THIS CERTIFICATE SHALL NOT BE REPRODUCED WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC.

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation and readability of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI Z540-1-1994 quality standards.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to either the SI or to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by JCGM 106:2012. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

Equations and Sample Calculations – ASTM E2780 & E2515

Manufacturer: MF Fire
Model: Nova C
Run: 1
Category:

Equations used to calculate the parameters listed below are described in this appendix. Sample calculations are provided for each equation. The raw data and printout results from a sample run are also provided for comparison to the sample calculations.

M_{Sdb} – Weight of test fuel spacers, dry basis, kg

M_{Cdb} – Weight of test fuel crib, excluding nails and spacers, dry basis, kg

D_{Cdb} - Density of fuel crib, excluding spacers and nails, dry basis, lbs/ft³

M_{FTAdb} - Total weight of fuel crib excluding nails, dry basis, kg

BR – Dry burn rate, kg/hr

V_s – Average gas velocity in the dilution tunnel, ft/sec

Q_{sd} – Average gas flow rate in dilution tunnel, dscf/hr

$V_{m(std)}$ – Volume of gas sampled, corrected to dry standard conditions, dscf

m_n – Total particulate matter collected, mg

C_s - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf

E_T – Total particulate emissions, g

PR - Proportional rate variation

PM_R – Particulate emissions for test run, g/hr

PM_F – Particulate emission factor for test run, g/dry kg of fuel burned

M_{Sdb} – Weight of test fuel spacers, dry basis, kg

ASTM E2780 equation (1)

$$M_{Sdb} = (M_{Swb}) (100 / (100 + FM_S))$$

Where,

FM_S = average fuel moisture of test fuel spacers, % dry basis

M_{Swb} = weight of test fuel spacers, wet basis, kg

Sample Calculation:

$$FM_S = 10.4 \%$$

$$M_{Swb} = 1.7 \text{ lbs}$$

0.4536 = Conversion factor from lbs to kg

$$M_{Sdb} = [(1.7 \times 0.4536) (100 / (100 + 10.4))]$$

$$M_{Sdb} = \mathbf{0.6983 \text{ kg}}$$

M_{Cdb} – Weight of test fuel crib, excluding nails and spacers, dry basis, kg
ASTM E2780 equation (2)

$$M_{Cdb} = \Sigma[(M_{CPnwb})(100/(100 + FM_{CPn}))]$$

Where,

M_{CPnwb} = weight of each test fuel piece n in fuel crib, excluding nails and spacers, wet basis, kg

FM_{CPn} = Average fuel moisture of test fuel n in fuel crib, % dry basis

Sample Calculation (test fuel piece 1):

$$M_{CPnwb} = 11.0$$

$$FM_{CPn} = 20.5$$

$$= 11.0 (100/(100+ 20.5)$$

$$= 9.1 \text{ lbs}$$

Total crib weight, excluding spacer 9.13 lbs

$$M_{Cdb} = \mathbf{4.14 \text{ kg}}$$

D_{Cdb} - Density of fuel crib, excluding spacers and nails, dry basis, lbs/ft³
ASTM E2780 equation (3)

$$D_{Cdb} = M_{Cdb}/V_C$$

Where,

$$V_C = \text{Volume of fuel crib, ft}^3$$

Sample calculation:

$$\begin{aligned} V_C &= 563.5 \text{ in}^3 \\ 1728 &= \text{conversion from in}^3 \text{ to ft}^3 \\ D_{Cdb} &= 9.13 / 563.5 * 1728 \\ &= \mathbf{27.9841} \text{ lbs/ft}^3 \end{aligned}$$

M_{FTAdb} - Total weight of fuel crib including spacers and nails, dry basis, kg
ASTM E2780 equation (4)

$$M_{FTAdb} = M_{Sdb} + M_{Cdb}$$

Sample calculation:

$$M_{FTAdb} = 0.698 + 4.14$$

$$= \mathbf{4.84 \text{ kg}}$$

Note: ASTM E2780 mistakenly calls this "Total weight of fuel crib **excluding** spacers and nails, dry basis, kg

BR – dry burn rate, kg/hr

ASTM E2780 equation (5)

$$BR = \frac{60 M_{FTAdb}}{\theta}$$

Where,

θ = Total length of test run, min

Sample Calculation:

$$M_{Bdb} = 4.84 \quad \text{kg}$$

$$\theta = 141 \quad \text{min}$$

$$BR = \frac{60 \times 4.84}{141}$$

$$BR = \mathbf{2.06} \quad \text{kg/hr}$$

V_s – Average gas velocity in the dilution tunnel, ft/sec

ASTM E2515 equations (9)

$$V_S = F_P \times K_P \times C_P \times (\sqrt{\Delta P})_{avg} \times \sqrt{\frac{T_{s(avg)}}{P_s \times M_s}}$$

Where:

- F_p = Adjustment factor for center of tunnel pitot tube placement, $F_p = \frac{V_{strav}}{V_{scent}}$, ASTM E2515 Equation (1)
- V_{scent} = Dilution tunnel velocity calculated after the multi-point pitot traverse at the center, ft/sec
- V_{strav} = Dilution tunnel velocity calculated after the multi-point pitot traverse, ft/sec
- k_p = Pitot tube constant, 85.49
- C_p = Pitot tube coefficient: 0.99, unitless
- ΔP* = Velocity pressure in the dilution tunnel, in H₂O
- T_s = Absolute average gas temperature in the dilution tunnel, °R; (°R = °F + 460)
- P_s = Absolute average gas static pressure in dilution tunnel, = P_{bar} + P_g, in Hg
- P_{bar} = Barometric pressure at test site, in. Hg
- P_g = Static pressure of tunnel, in. H₂O; (in Hg = in H₂O/13.6)
- M_s = **The dilution tunnel wet molecular weight; M_s = 28.78 assuming a dry weight of 29 lb/lb-mole

Sample calculation:

$$F_p = \frac{21.68}{22.34} = 0.971$$

$$V_s = 0.971 \times 85.49 \times 0.99 \times 0.323 \times \left(\frac{128.4 + 460}{\left(30.05 + \frac{-0.10}{13.6} \right) \times 28.78} \right)^{1/2}$$

$$V_s = \mathbf{21.87} \text{ ft/s}$$

*The ASTM test standard mistakenly has the square root of the average delta p instead of the average of the square root of delta p. The current EPA Method 2 is also incorrect. This was verified by Mike Toney at EPA.

**The ASTM test standard mistakenly identifies M_s as the dry molecular weight. It should be the wet molecular weight as indicated in EPA Method 2.

Q_{sd} – Average gas flow rate in dilution tunnel, dscf/hr

ASTM E2515 equation (3)

$$Q_{sd} = 3600 \times (1 - B_{ws}) \times v_s \times A \times \frac{T_{std}}{T_{s(avg)}} \times \frac{P_s}{P_{std}}$$

Where:

- 3600 = Conversion from seconds to hours (ASTM method uses 60 to convert in minutes)
- B_{ws} = Water vapor in gas stream, proportion by volume; assume 2%
- A = Cross sectional area of dilution tunnel, ft²
- T_{std} = Standard absolute temperature, 528 °R
- P_s = Absolute average gas static pressure in dilution tunnel, = P_{bar} + P_g, in Hg
- T_{s(avg)} = Absolute average gas temperature in the dilution tunnel, °R; (°R = °F + 460)
- P_{std} = Standard absolute pressure, 29.92 in Hg

Sample calculation:

$$Q_{sd} = 3600 \times (1 - 0.02) \times 21.87 \times 0.196 \times \frac{528}{128.4 + 460} \times \frac{30 + \frac{-0.10}{13.6}}{29.92}$$

Q_{sd} = **13647.6** dscf/hr

$V_{m(std)}$ – Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf
 ASTM E2515 equation (6)

$$V_{m(std)} = K_1 V_m Y \frac{P_{bar} + \left(\frac{\Delta H}{13.6}\right)}{T_m}$$

Where:

- K_1 = 17.64 °R/in. Hg
- V_m = Volume of gas sample measured at the dry gas meter, dcf
- Y = Dry gas meter calibration factor, dimensionless
- P_{bar} = Barometric pressure at the testing site, in. Hg
- ΔH = Average pressure differential across the orifice meter, in. H₂O
- T_m = Absolute average dry gas meter temperature, °R

Sample Calculation:

Using equation for Train 1:

$$V_{m(std)} = 17.64 \times 22.785 \times 1.007 \times \frac{\left(30.05 + \frac{1.25}{13.6} \right)}{\left(91.6 + 460 \right)}$$

$$V_{m(std)} = \mathbf{22.115} \text{ dscf}$$

Using equation for Train 2:

$$V_{m(std)} = 17.64 \times 22.431 \times 1.015 \times \frac{\left(30.05 + \frac{0.95}{13.6} \right)}{\left(92.6 + 460 \right)}$$

$$V_{m(std)} = \mathbf{21.886} \text{ dscf}$$

Using equation for ambient train:

$$V_{m(std)} = 17.64 \times 22.02 \times 1.012 \times \frac{\left(30.05 + \frac{0.00}{13.6} \right)}{\left(83.2 + 460 \right)}$$

$$V_{m(std)} = \mathbf{21.746} \text{ dscf}$$

m_n – Total Particulate Matter Collected, mg

ASTM E2515 Equation (12)

$$m_n = m_p + m_f + m_g$$

Where:

m_p = mass of particulate matter from probe, mg

m_f = mass of particulate matter from filters, mg

m_g = mass of particulate matter from filter seals, mg

Sample Calculation:

Using equation for Train 1 (first hour):

$$m_n = 0.0 + 0.0 + 0.0$$

$$m_n = 0.0 \text{ mg}$$

Using equation for Train 1 (post-first hour):

$$m_n = 0.0 + 5.1 + 0.9$$

$$m_n = 6.0 \text{ mg}$$

Train 1 aggregate:

$$m_n = 0.0 + 6.0$$

$$m_n = \mathbf{6.0} \text{ mg}$$

Using equation for Train 2:

$$m_n = 0 + 3.1 + 0.3$$

$$m_n = \mathbf{3.4} \text{ mg}$$

C_s - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dsc
ASTM E2515 equation (13)

$$C_s = K_2 \times \frac{m_n}{V_{m(std)}}$$

Where:

- K₂ = Constant, 0.001 g/mg
- m_n = Total mass of particulate matter collected in the sampling train, mg
- V_{m(std)} = Volume of gas sampled corrected to dry standard conditions, dscf

Sample calculation:

For Train 1:

$$C_s = 0.001 \times \frac{6.0}{22.12}$$

$$C_s = \mathbf{0.00027} \text{ g/dscf}$$

For Train 2

$$C_s = 0.001 \times \frac{3.4}{21.89}$$

$$C_s = \mathbf{0.00016} \text{ g/dscf}$$

For Ambient Train

$$C_r = 0.001 \times \frac{0.1}{21.75}$$

$$C_r = \mathbf{0.000005} \text{ g/dscf}$$

E_T – Total Particulate Emissions, g

ASTM E2515 equation (15)

$$E_T = (c_s - c_r) \times Q_{std} \times \theta$$

Where:

- C_s = Concentration of particulate matter in tunnel gas, g/dscf
- C_r = Concentration particulate matter room air, g/dscf
- Q_{std} = Average dilution tunnel gas flow rate, dscf/hr
- θ = Total time of test run, minutes

Sample calculation:

For Train 1

$$E_T = (\underline{0.000271} - 0.000005) \times \underline{13647.6} \times \underline{141} /60$$
$$E_T = \underline{8.55} \text{ g}$$

For Train 2

$$E_T = (\underline{0.000155} - 0.000005) \times \underline{13647.6} \times \underline{141} /60$$
$$E_T = \underline{4.83} \text{ g}$$

Average

$$E = \underline{6.69} \text{ g}$$

Total emission values shall not differ by more than 7.5% from the total average emissions

$$7.5\% \text{ of the average} = \underline{0.50}$$

$$\text{Train 1 difference} = \underline{1.86}$$

$$\text{Train 2 difference} = \underline{1.86}$$

PR - Proportional Rate Variation

ASTM E2515 equation (16)

$$PR = \left[\frac{\theta \times V_{mi} \times V_s \times T_m \times T_{si}}{\theta_i \times V_m \times V_{si} \times T_{mi} \times T_s} \right] \times 100$$

Where:

- θ = Total sampling time, min
- θ_i = Length of recording interval, min
- V_{mi} = Volume of gas sample measured by the dry gas meter during the "ith" time interval, dcf
- V_m = Volume of gas sample as measured by dry gas meter, dcf
- V_{si} = Average gas velocity in the dilution tunnel during the "ith" time interval, ft/sec
- V_s = Average gas velocity in the dilution tunnel, ft/sec
- T_{mi} = Absolute average dry gas meter temperature during the "ith" time interval, °R
- T_m = Absolute average dry gas meter temperature, °R
- T_{si} = Absolute average gas temperature in the dilution tunnel during the "ith" time interval, °R
- T_s = Absolute average gas temperature in the dilution tunnel, °R

Sample calculation (for the first 1 minute interval of Train 1):

$$PR = \left(\frac{141 \times 0.16 \times 21.87 \times (128.4 + 460) \times (91.6 + 460)}{1 \times 22.79 \times 22.92 \times (91.6 + 460) \times (84.0 + 460)} \right) \times 100$$

$$PR = \underline{102} \%$$

PM_R – Particulate emissions for test run, g/hr

ASTM E2780 equation (6)

$$PM_R = 60 (E_T/\theta)$$

Where,

E_T = Total particulate emissions, grams

θ = Total length of full integrated test run, min

Sample Calculation:

$$E_T (\text{Dual train average}) = 6.69 \text{ g}$$

$$\theta = 141 \text{ min}$$

$$PM_R = 60 \times (6.69 / 141)$$

$$PM_R = \mathbf{2.85} \text{ g/hr}$$

PM_F – Particulate emission factor for test run, g/dry kg of fuel burned
ASTM E2780 equation (7)

$$PM_F = E_T / M_{FTAdb}$$

Sample Calculation:

$$E_T (\text{Dual train average}) = 6.69 \text{ g}$$

$$M_{Bdb} = 4.84 \text{ kg}$$

$$PM_F = 6.69 / 4.84$$

$$PM_F = \mathbf{1.38} \text{ g/kg}$$

OMB Control No. 2060-0693
Approval expires 03/31/2019

EPA Form 6400-05

RESIDENTIAL WOOD HEATER 30-DAY NOTIFICATION

INSTRUCTIONS

The manufacturer of an affected wood/pellet heater/central heater model line must notify the U.S. Environmental Protection Agency (EPA) of the date that certification testing is scheduled to begin. The EPA at least 30 days before the start of testing.

This notification must be signed by a responsible representative of the manufacturer or an authorized representative. Once completed, this notification must be submitted to WoodHeaterReports@epa.gov.

Affected residential wood-burning room heaters currently include, but are not limited to, adjustable burn rate stoves, catalytic adjustable burn rate stoves; hybrid adjustable burn rate stoves; single burn rate stoves; and pellet stoves. (40 CFR Part 60, Subpart AAA)

Affected residential wood-burning central heaters currently include, but are not limited to, indoor hydronic heaters ("wood boilers"); outdoor hydronic heaters ("outdoor wood boilers"); and forced-air furnaces ("warm air furnaces"). (40 CFR Part 60, Subpart QQQQ)

The public reporting and recordkeeping burden for this collection of information is estimated to average 8 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, Regulatory Support Division, U.S. Environmental Protection Agency (EPA) (2822T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed application to this address.

Disclaimer: The statutory provisions and the EPA regulations described in this document contain legally binding requirements. This document is not a substitute for those provisions or regulations, nor is it a regulation itself. In the event of a discrepancy, please refer to Part 60 Subparts AAA AND QQQQ, Sections 60.537 and 60.5479. If you have additional questions, please contact Rafael Sanchez at 202-564-7028, Residential Wood Heater Compliance Program Lead, or via email at sanchez.rafael@epa.gov.

MANUFACTURER INFORMATION

Manufacturer's Name: MF FIRE, INC.

Manufacturer's Physical Address: 3031 Washington Boulevard, Suite G, Baltimore, MD 21230

Manufacturer's Mailing Address (if different from physical address):

Name and Title of Manufacturer's Responsible/Authorized Representative Submitting this Application: Ryan Fisher, Chief Operating Officer

Manufacturer's Contact E-mail: ryan@mffire.com

Manufacturer's Phone Number: 240-285-4225

Manufacturer's Website Address: www.mffire.com

Manufacturer's Website Address where the test report and owner's manual will be posted, if known: www.mffire.com

AFFECTED WOOD HEATER MODEL INFORMATION

Model Name(s) (as appearing on the certification test report). Please note: the model name and design number must clearly distinguish one model from another. The name and design number cannot include the EPA symbol or logo or name or derivatives such as "EPA": Nova C

Model Number(s) (as appearing on the certification test report, if applicable): 012

OMNI-Test Laboratories Quality Assurance / Quality Control Statement

OMNI follows the guidelines of ISO/IEC 17025, “General Requirements for the Competence of Testing and Calibration Laboratories,” and the quality assurance/quality control (QA/QC) procedures found in OMNI’s Quality Assurance Manual.

OMNI’s scope of accreditation includes, but is not limited to, the following:

- To perform product safety testing by the International Accreditation Service, Inc. (formerly ICBO ES) under accreditation as a testing laboratory designated TL-130.
- To perform product safety testing as a “Certification Organization” by the Standards Council of Canada (SCC).
- Serving as a testing laboratory for the certification of wood heaters by the U.S. Environmental Protection Agency.

This report is issued within the scope of OMNI’s accreditation. Accreditation certificates are available upon request.

The manufacturing facility and quality control system for the production of the Nova C at MF Fire was evaluated and it was determined to comply with OMNI’s processes and quality control procedures.

This report shall not be reproduced, except in full, without the written approval of OMNI-Test Laboratories, Inc.

8. APPENDICIES

Appendix A

Corrected Filter Data and Results

Wood Heater Lab Data - ASTM E2780 / ASTM E2515

Manufacturer: MF Fire _____ Equipment Numbers: _____
 Model: Nova C _____
 Tracking No.: 2468 _____
 Project No.: 0552WS003E _____
 Run #: 1 _____
 Date: 7/11/23 _____

UNCORRECTED

First Hour

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter				0.0
C. Rear filter catch	Filter				0.0
D. Probe catch*	Probe				0.0
E. Filter seals catch*	Seals				0.0

Sub-Total Total Particulate, mg: 0.0

TRAIN 1

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
B. Front filter catch	Filter	E985	123.5	118.3	5.2
C. Rear filter catch	Filter	E986	118.2	118.3	0.0
D. Probe catch*	Probe	13	114321.5	114321.5	0.0
E. Filter seals catch*	Seals	S526	3320.1	3320.1	0.0

Sub-Total Total Particulate, mg: 5.2

Train 1 Aggregate Total Particulate, mg: 5.2

TRAIN 2

Sample Component	Reagent	Filter, Probe or Dish #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch	Filter	E987	122.8	117.9	4.9
B. Rear filter catch	Filter	E988	116.3	118.1	0.0
C. Probe catch*	Probe	35	114327.4	114327.4	0.0
D. Filter seals catch*	Seals	S527	3269.4	3269.1	0.3

Total Particulate, mg: 5.2

AMBIENT

Sample Component	Reagent	Filter # or Probe #	Weights		
			Final, mg	Tare, mg	Particulate, mg
A. Front filter catch*	Filter	E989	117.8	117.7	0.1

Total Particulate, mg: 0.1

*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be part of the seal weight.

Component	Equations:
A. Front filter catch	Final (mg) - Tare (mg) = Particulate, mg
B. Rear filter catch	Final (mg) - Tare (mg) = Particulate, mg
C. Probe catch	Final (mg) - Tare (mg) = Particulate, mg

MF Fire Nova Application for U.S. EPA Wood Heater Certification

33 messages

Ryan Fisher <ryan@mfire.com>

To: WoodHeaterReports@epa.gov

Cc: aldridge.amanda@epa.gov, "Sanchez, Rafael" <Sanchez.Rafael@epa.gov>, Paul LaPorte <paul@mfire.com>, Information <info@mfire.com>, Kelli O'Brien <kelli@clearstak.com>

Thu, May 3, 2018 at 12:26 PM

To whom it may concern,

Attached please find our application for U.S. EPA Wood Heater Certification for MF Fire's second wood stove, Nova as well as a packet titled "Model Nova EPA Report (CBI)" which includes:

- Certification test report prepared by an EPA-approved test laboratory, Clearstak LLC
- Certification of conformity by an EPA-approved third-party certifier, UL LLC
- Quality assurance plan
- Additional required supporting information.

289

Two additional comments:

- When requesting the ISO certificates from the third party certifier, UL LLC, the response provided to MF Fire from UL LLC was "We had to provide those Cert. copies at the time we received the Third Party Accreditation. EPA has those Certs on File. We do not need to provide those again."
- MF Fire filled out the application to the best of our understanding. MF Fire was slightly unclear on what the EPA is looking for in the required manufacturer statements in sections 2, 4, 7, and 8. The requirements of sections 2, 4, 7, and 8 are clear, but please inform MF Fire if the form was not filled out as intended by the EPA.

Thank you for your consideration,

Ryan Fisher
COO, MF Fire

Mon, Aug 20, 2018 at 3:02 PM

To whom it may concern,

I am emailing to receive an update on this submission. If you could please provide an update on when the decision/approval can be expected, it would much appreciated.

Best regards,

Ryan Fisher

Hi Ryan,

Thank you for contacting the U. S. Environmental Protection Agency (EPA). I am currently working on your certification request. It should take a few weeks to get it through our management chain and get you a certification determination.

Rafael Sanchez, Ph.D.

Wood Heater Program Lead

Hi Ryan,

I did a quick review for completeness on your test report. Below are some findings or deficiencies:

1. Table 5 Emissions Summary B: CO value should be presented in g/min. Please covert units to the specified units.
2. There is no narration or description of test runs. Please address.

(5) All documentation pertaining to a valid certification test, including the complete test report and, for all test

runs: Raw data sheets, laboratory technician notes, calculations and test results. Documentation must include

the items specified in the applicable test methods. Documentation must include discussion of each test run and its

appropriateness and validity, and must

include detailed discussion of all

anomalies, whether all burn rate

categories were achieved, any data not used in the calculations and, for any test runs not completed, the data collected during the test run and the reason(s) that the test run was not completed and why. The burn rate for the low burn rate category must be no greater than the rate that an operator can achieve in home use and no greater than is advertised by the manufacturer or retailer. The test report must include a summary table that clearly presents the individual and overall emission rates, efficiencies and heat outputs.

3. No owner's manual. Please submit one.

4. Test report doesn't mention the application of the 3/6/18 alternative test method. The Operation Procedures section should note that ATM was used.

5. The CBI test report should be sent separately via US Mail or dropbox (not email) and not combined with the non-CBI test report.

6. There is no data for run #2 nor narration. Please provide data.

Please address above-referenced deficiencies and resubmit test reports by 8/24/18. If you have further questions, please let me know.

Rafael Sanchez, Ph.D.

Hi Ryan,

Per our conversation, below are additional deficiencies that I identified after submission of the owner's manual.

1. **The test report should include an engineering diagram showing the location of the temperature sensor.** Per WH rule: (h) Temperature sensor requirement.

An affected wood heater equipped with a catalytic combustor must be equipped with a temperature sensor that can monitor combustor gas stream temperatures within or immediately downstream [within 2.54 centimeters. 60.532.

2. Owner's manual should have the following statements for catalytic equipped heaters: 60.536

“This wood heater contains a catalytic combustor, which needs periodic inspection and replacement for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual, or if the catalytic element is deactivated or removed.”

3. *Smoke and Carbon Monoxide*

Emissions and Monitors Owner's manual must include:

- (a) Discussion of smoke and carbon monoxide (CO) emissions, including the CO data submitted in the certification application and expected variations for different operating conditions;

- (b) Recommendation to have smoke monitors; and
- (c) Recommendation to have monitors for areas that are expected to generate CO, e.g., heater fueling areas, pellet fuel bulk storage areas, sheds containing hydronic heaters. **Appendix I to Part 60 (page 13753)**

For your convenience, I have attached a copy of the regulations. Please submit the above information by 8/24/18. If you have further questions, please let me know.

Hi Rafael,

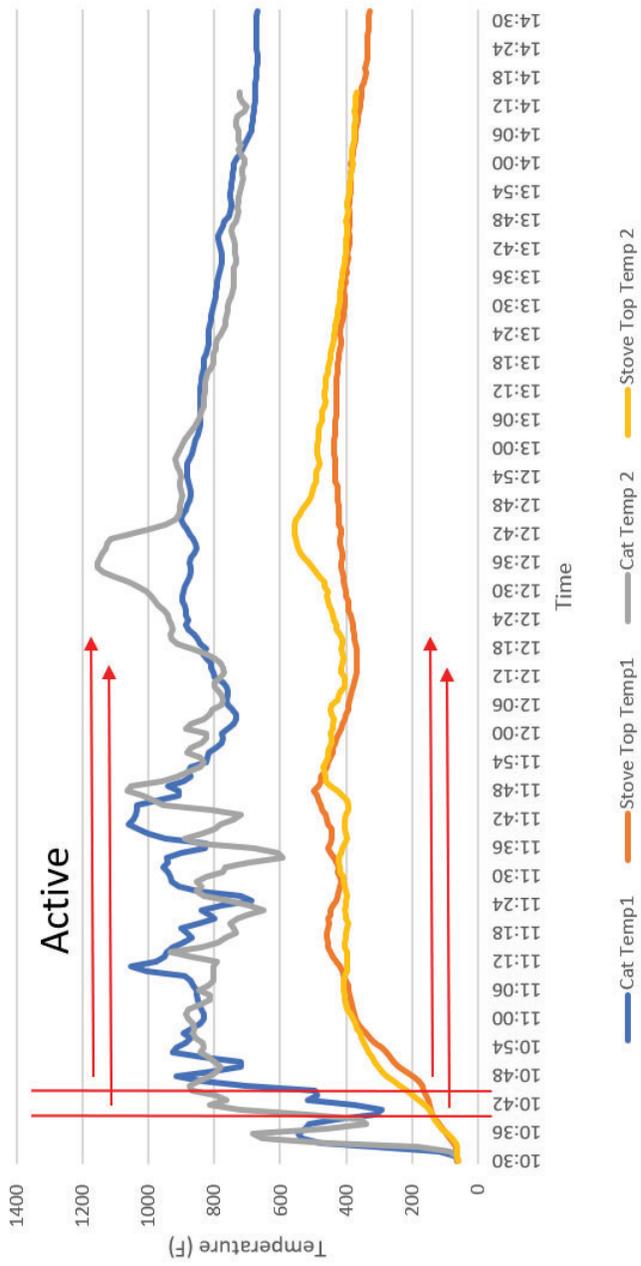

Per our discussion this week, we would like to use a magnetic thermometer placed on top of the stove (Nova) within 1" of the exhaust of the catalytic combustor. The stove top temperature provides a reliable reference to post-catalytic combustor temperature regarding when a user should engage the bypass. Engaging the catalytic combustor via the bypass is recommended at or above 500 F. As you can see from the temperature graphs below from our EPA testing (below and attached), this is reliably seen when the stove top temperature above the catalytic exhaust reaches 200 F. The magnetic thermometer proposed for the stove top of Nova would read "Active" when the stove top thermometer reaches 200 F and above. This, combined with Owner's Manual instruction on using the thermometer and bypass, allows simple instruction to the user on when to engage the catalytic combustor via the bypass.

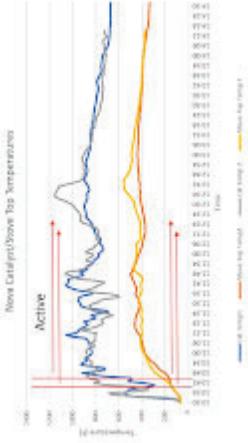

We see precedent in the market in at least one instance: the Woodstock Soapstone Absolute Steel Hybrid 211 which is certified for 2020. According to the Owner's Manual for this stove, a *stove pipe* thermometer is used to tell the user when to engage the catalytic combustor. We believe our stove top thermometer located within 1" of catalytic combustor exhaust is just as, if not more, effective than a stove pipe thermometer for informing the user on when to engage the catalytic combustor.

I have attached an edit to our engineering drawings detailing this placement.

Please see the pictures below and attached and let me know if you have any questions. We look forward to getting this wrapped up as soon as possible.

Hi Rafael,

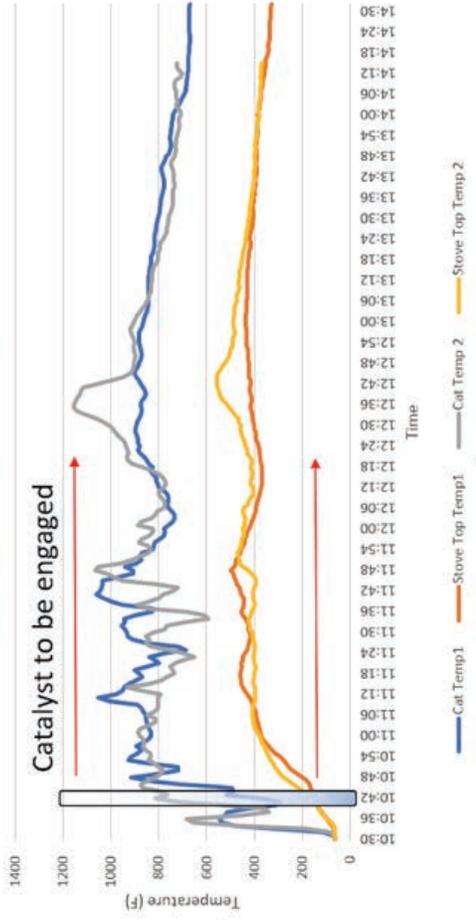

Per our discussion this week, we would like to use a magnetic thermometer placed on top of the stove (Nova) within 1" of the exhaust of the catalytic combustor. The stove top temperature provides a reliable reference to post-catalytic combustor temperature regarding when a user should engage the bypass. Engaging the catalytic combustor via the bypass is recommended at or above 500 F in the exhaust near the catalytic combustor. As you can see from the temperature graphs below from our EPA testing (below and attached), this is reliably seen when the stove top temperature above the catalytic combustor exhaust area reaches 200 F. The blue shaded rectangle on the graph encompasses the area on both tests where the 500 F post-catalytic combustor temperature is met. The magnetic thermometer proposed for the stove top of Nova would read "Active" when the stove top thermometer reaches 200 F and above. An example picture of this style thermometer is attached. This, combined with Owner's Manual instruction on using the thermometer and bypass, allows simple instruction to the user on when to engage the catalytic combustor via the bypass.

We see precedent in the market in at least one instance: the Woodstock Soapstone Absolute Steel Hybrid 211 which is certified for 2020. According to the Owner's Manual for this stove, a *stove pipe* thermometer is used to tell the user when to engage the catalytic combustor. We believe our stove top thermometer located within 1" of catalytic combustor exhaust is just as, if not more, effective than a stove pipe thermometer for informing the user on when to engage the catalytic combustor.

I have attached an edit to our engineering drawings detailing this placement. The edit can be seen on the Nova-01 drawing in the top left view. The location of the thermometer is 1" from the catalytic combustor effluent in the horizontal plane, and less than 1" from the catalytic combustor in the vertical plane.

Please see the pictures below and attached and let me know if you have any questions. We look forward to getting this wrapped up as soon as possible. Best regards,

Nova Catalyst/Stove Top Temperatures

Hi Ryan,

I had one of my colleague, Mike Toney, review the eng diagrams and other information. To continue our review, we need to know where the temp sensor is in relation to the cat combustor as shown in plain view cc (from the back of the stove in inches.) Please submit by 8/28/18.

Ryan, I noticed you mentioned the Woodstock hybrid heater and its owner's manual. Is that OM from a recent model or one that was manufactured back in 2015?

Hi Rafael,

I have attached an updated drawing that details the distance I believe you are requesting. I think you are requesting the distance form the magnetic thermometer to the top of the catalytic combustor. That distance is 13/16" and I had it added to the bottom-right drawing in the attached drawing. I had this shown from a side cut view because I thought it would be most clear. Please check it out and let me know if you need an additional dimension specified.

Regarding the Woodstock Soapstone model I referred to, I am referring to the documentation on their website which shows a test date of Jan 5 - 14 2016 with a report date of February 2016.

Best,

Ryan Fisher
